

VENTURA COUNTY FIRE DEPARTMENT

Buenaventura RX

RX Burn Overview

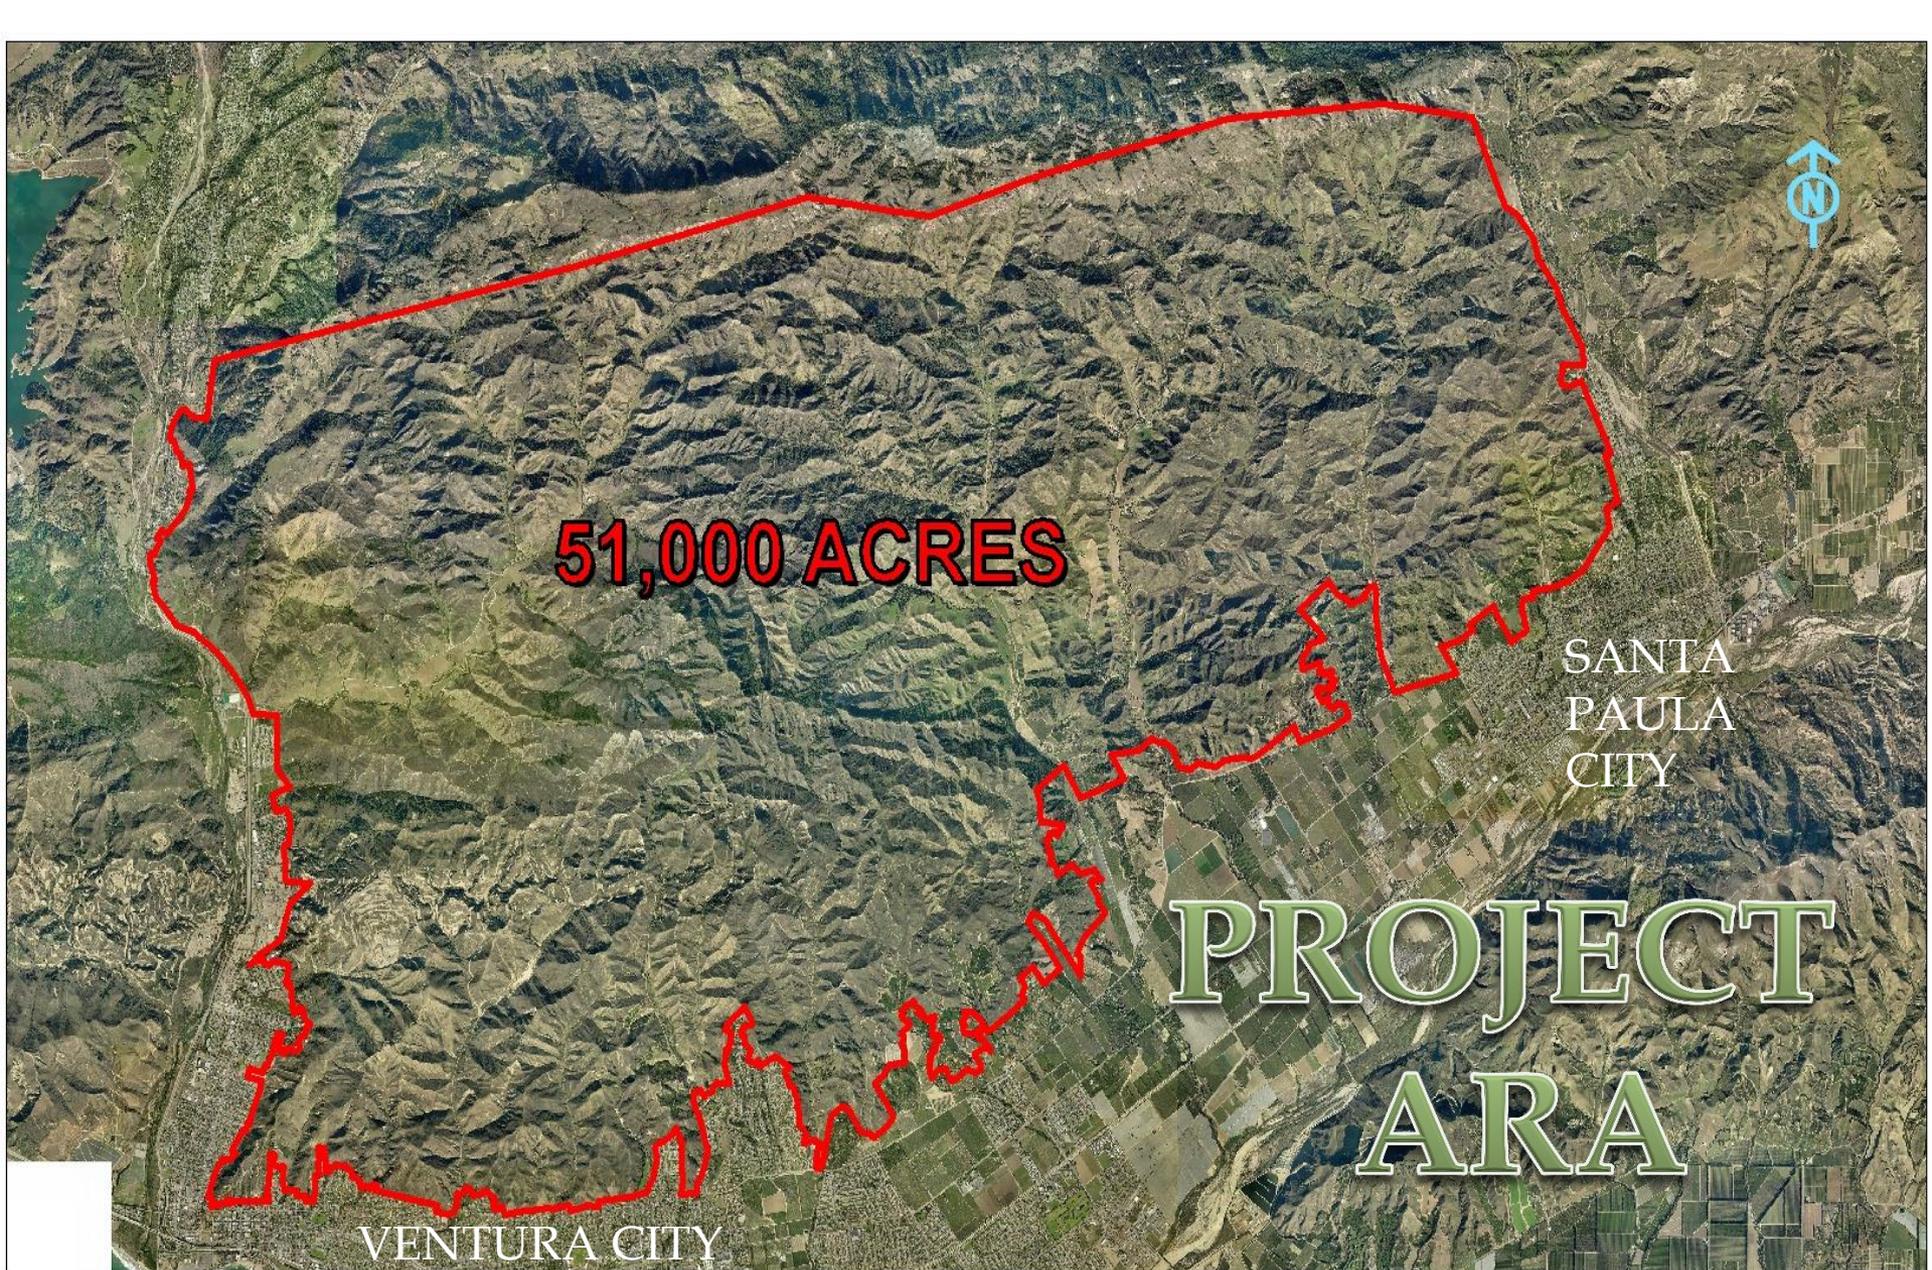

RX Burn Overview

The Buenaventura Vegetation Management Plan (VMP) is a range management plan designed to reduce the effects of wildfire to the wildland urban interface (WUI) adjacent to the cities of Ventura, Santa Paula, Saticoy and the agricultural assets associated with these areas. In addition the management plan will help to support current grazing practices by expanding rangeland practices while maintaining a reduced fuel load.

RX Burn Overview

A series of prescribed burns or treatment areas will be accomplished throughout the project area. These treatment areas will be determined based upon overall program goals with the least amount of impacts to environmental and cultural resources. Treatment areas will be isolated by establishing primary and secondary control lines within the project area. The methods used to establish these control lines will be utilization of current ranch road systems, previous hand and mechanical fuel breaks used in previous prescribed fire projects and wildfires. New control lines will be established in areas to insure perimeter control as needed.
