A VISION FOR A NATURAL ENVIRONMENT THAT IS MORE FIRE RESILIENT; BUILDINGS AND INFRASTRUCTURE THAT ARE MORE FIRE RESISTANT; AND A SOCIETY THAT IS MORE AWARE OF AND RESPONSIVE TO THE BENEFITS AND THREATS OF WILDFIRE; ALL ACHIEVED THROUGH LOCAL, STATE, FEDERAL, TRIBAL, AND PRIVATE PARTNERSHIPS.

Unit Strategic Fire Plan developed for San Bernardino Unit:

This Plan:

- Was collaboratively developed. Interested parties, Federal, State, City, and County agencies within the Unit have been consulted and are listed in the plan.
- Identifies and prioritizes pre-fire and post fire management strategies and tactics meant to reduce the loss of values at risk within the Unit.
- Is intended for use as a planning and assessment tool only. It is the responsibility of those implementing the projects to ensure that all environmental compliance and permitting processes are met as necessary.

PRE-FIRE ENGINEER

Date
EXECUTIVE SUMMARY:

The CAL FIRE San Bernardino Unit is comprised of San Bernardino, Inyo and Mono counties where we carry out CAL FIRE’s mission to serve and safeguard the people, and protect the property and resources of California. This is accomplished through the protection of State Responsibility Areas (SRA), cities under contract, and by protection of the public and the watersheds in its geographical area.

In response to the unprecedented fire activity, and changing climatic conditions, CAL FIRE is reinvigorating its fuel treatment programs, seeking to increase the pace and scale of fuels treatments and prevention activity. The San Bernardino Unit, in support of the Department wide effort, has updated the Unit Fire Plan to increase the number of acres treated, expand the type and variety of prevention activities and to accomplish that in a strategic manner, which protects the communities and the people who live there.

In addition to the fire threat, the forests and woodlands of San Bernardino County are under assault from non-native pests, including the Goldspotted Oak Borer (GSOB) which was discovered in the Oak Glen area in 2018. Polyphagous Shot Hole Borer (PHSB) and Kuroshio Shot Hole Borer (KHB) have also invaded the Southwest portion of the County killing trees in urban and wildland areas. These pests will dramatically change the wildland and urban environments in ways we don’t yet know or understand. Unit personnel are working closely with community members, elected officials and cooperating agencies to mount a united fight against these very destructive invaders.

The Unit Fire Plan that follows, provides a framework for the San Bernardino Unit to take on these and other challenges to help keep the public safe, protect our communities, as well as the natural ecosystems that surround and intertwine them.

Respectfully,

[Signature]

Unit Chief
San Bernardino-Inyo-Mono Unit
SECTION I: UNIT OVERVIEW

UNIT DESCRIPTION
San Bernardino Unit is spread through four counties spanning the state from central California in the eastern Sierras to the counties of Los Angeles and San Bernardino bordering the Pacific Ocean. The total Unit acreage is 1,408,000 of SRA plus 18,502 acres of wildland contracts, these are located within San Bernardino, Los Angeles, Inyo, and Mono counties. All the counties have multiple public lands within their response area, which include the Bureau of Land Management, National Forest, National Park Service, US Fish and Wildlife, California State Parks, and local county parks.

The pre-dominate fuel type is grass and sage, however, there are large areas within SRA that have timber and 6’-10’ coastal chaparral. The fuel conditions in San Bernardino can change rapidly due to drought or Santa Ana winds which can change fuel conditions from low burning indices to extreme indices within a few of hours.

There is no one type of general topography in the Unit, but a general description would be that the Unit has the lowest and the highest elevation in North America. The terrain varies from flat and rolling hills to the slopes of the Sierra Mountain Range.

There have been 118 fires in San Bernardino Unit since 1960 that have exceeded 2000 acres, the largest fire being the Old Fire in 2003 that exceeded 91,000 acres, destroyed over 400 homes, with 6 lives lost. There have been numerous large fires with loss of life and property in the Unit some of the worst being; the 1980 Panorama Fire 23,625 acres, the 1999 Turtle Fire 3,396 acres, the 2006 Sawtooth fire 61,766 acres, the 2008 Freeway Fire 30,305 acres, the 2015 Round Fire 7,000 acres and the 2016 Pilot and Blue Cut Fires, burning 8,110 and 36,274 acres respectively. Most fires in the unit have the primary factors of being wind driven and heavy fuel loading to promote extreme rates of spread. The growing wildland urban interfaces mean that 95% of all fires within the unit have potential to destroy property, life, and high value watershed.

UNIT PREPAREDNESS AND FIREFIGHTING CAPABILITIES

A. CAL FIRE Facilities and Initial Attack Resources
   1. Engine Stations
      • Apple Valley: 1 Type 3 Engine
      • Big Bear Valley: 1-Type 3 Engine
      • Bishop: 1-Type 3 Engine
      • Chino Hills: 1-Type3 Engine
      • Crestline: 2-Type 3 Engines
      • Devore: 1-Type 3 Engine
      • Independence: 2-Type 3 Engine
      • Lucerne Valley: 1-Type3 Engine
      • Phelan: 1-Type 3 Engines
      • Running Springs: 1-Type 3 Engine
      • Sky Valley: 1 Type 3 Engine
      • Yucaipa: 2-Type 3 Engines
• Yucca Valley: 2-Type 3 Engine

2. Camps and Aircraft
   • Fenner Canyon Conservation Camp, Valyermo, CA:
     ♦ 6-Type1 Hand crews
   • Owens Valley Conservation Camp, Bishop, CA
     ♦ 5-Type1 Hand crews
   • Pilot Rock Conservation Camp, Crestline CA:
     ♦ 4-Type1 Hand crews
   • Prado Camp Conservation, Chino CA:
     ♦ 4-Type1 Hand crews
   • Prado Helitack
     ♦ 1-Type2 Helicopter with Crew

B. Local Fire Departments that have Mutual/Automatic Aid Agreements with CAL FIRE BDU:

   1. Angeles National Forest, San Dimas CA
   2. Apple Valley Fire Department
   3. Bureau of Land Management, Riverside CA
   4. Inyo County Volunteers, Inyo County CA
   5. Loma Linda Fire Department, Loma Linda CA
   6. Los Angeles City Fire Department, Los Angeles City CA
   7. Mono County Volunteers, Mono County CA
   8. National Park Service, Barstow and Joshua Tree CA
   9. Rancho Cucamonga Fire Department, Rancho Cucamonga CA
   10. Redlands Fire Department, Redlands CA
   11. Running Springs Fire Department
   12. San Bernardino County Fire Department, San Bernardino CA
   13. San Bernardino National Forest, San Bernardino CA
   14. San Manuel Fire Department

C. Dispatch Agreements:

   1. Arrow Bear Fire Department, Big Bear CA
   2. Morongo Valley Fire Department, Morongo CA
   3. Newberry Fire Department, Newberry CA
   4. Yermo-Dagget Fire Department, Yermo CA
SECTION II: COLLABORATION

COMMUNITY / AGENCIES / FIRE SAFE COUNCILS

RPC 3(e)(iv)
SECTION III:
VALUES

1. Air Quality:
   • Portions of the Unit reside in the South Coast Air Basin, one of the most heavily impacted air basins in the nation. The remainder of the Unit lies in the Mojave and Great Basin districts.

2. Ecosystem:
   • Multiple Rare, threatened and endangered species are found in the Unit. The California Natural Diversity Data Base maintains and updates the lists of species monthly.

3. Fire / Flood:
   • Portions of the San Bernardino Unit contain soils, topography, climate and vegetation that make it one of the most severe fire/flood cycle locations in the state. The Owens Valley is also subject to severe fires/flooding, but to a lesser extent.

4. Fish & Game:
   • Hunting and fishing is one of the biggest draws for recreation in Inyo and Mono counties. The Owens Valley and surrounding areas are known for its fishing not only for its native brown trout, but also for its rainbow and brook trout. For this reason, several State and private hatcheries are in the area. The San Bernardino Mountains also have several lakes and streams that provide good fishing opportunities.

5. Historic:
   • Multiple historic and prehistoric sites exist within the Unit. The Owens Valley is particularly rich in prehistoric sites. The Information Centers in San Bernardino and Riverside maintain the archaeological record for areas covered by the Unit.

6. Housing:
   • With increased population growth in Southern California we have seen more houses being built within the Wildland Urban Interface of San Bernardino County. We have also noticed that more of these residences are high dollar, large square foot structures, with poor access.

7. Hydroelectric:
   • The Unit has several .1 MW or above hydroelectric facilities in all three Counties, that lie within the SRA.

8. Infrastructure:
   • Within the Unit we have several major electrical transmission lines that feed into the Inland Empire and LA basins. The CAL-NEV pipe line supplies fuel oil between California and Nevada. The BNSF Transcontinental route between Chicago and Los Angeles is located within the Unit. The California Aqueduct, Interstate 15, US Highway 395, State Highways 18, 62, and 138 are major transportation corridors.

9. Range:
   • There is minimal rangeland within the Unit. Most is in the Owens Valley Division.

10. Recreation:
    • Recreation is a large part of the Unit. With the San Bernardino Mountains and the
Owens Valley providing hunting, hiking, biking, fishing, camping, skiing, hang gliding and many other outdoor activities. The desert battalion has numerous Off Highway Vehicle opportunities. In peak season the population in some of these areas can double with visitors.

11. Scenic:
   - The Unit boasts several scenic byways. From the Rim of the World Highway that runs along the south face of the San Bernardino Mountains, and thru the Big Bear Valley, to the majestic views along Highway 395 that runs through the Owens Valley and up to the Nevada border, along with the historic Route 66.

12. Soil:
   - In San Bernardino County, we have noticed areas of the mountain sloughing off top soils. We believe this is caused by the continual intense burning conditions that have caused most of these areas to type convert the fuels to annual grasses.

13. Timber:
   - Much of the timber in the Unit has little commercial value. The bulk of its value is in recreation, scenic, and ecological realm.

14. Water:
   - The Unit has identified five major watershed areas that are in the Very High Fire Hazard area: Morongo basin, Mojave, Owens, Santa Ana River and Walker River. There are several other watersheds but most feed into the ones previously mentioned. Along with the watersheds the Unit has two major water transport systems; the California aqueduct and the LADWP water project in the Owens Valley. Both have several lakes and waterways that make up the system, with most of the water supplying the demand in the Inland Empire, and LA basins.

SECTION IV:
PRE-FIRE MANAGEMENT STRATEGIES

A. FIRE PREVENTION

1. Update and implement the Unit Burn Permit Administrative Plan.
2. Continue collaboration with Edison on Operation Santa Ana to reduce vegetation fires that are caused when trees, grasses and power lines interact with one another.
3. Follow up on grant monies for the Fire Prevention road side signs program.
4. Educate and assist all Chief Officers in the importance of documentation and overall needs to their own battalions pertaining to Fire Prevention.
5. Continue interacting with the Fire Safe Councils within the Unit and reporting back to the Fire Prevention Bureau on the programs established with the councils.
6. Continue with the MAST defensible space demonstration house program.
7. Continue working on the Juvenile Fire Setters (JFS) program, and work on establishing a JFS program within Inyo and Mono counties.
8. Evaluate and map all fire defense water tanks / cisterns, and truck trails in the Unit.
9. Utilize Cal Mapper for collecting data, tracking, fiscal reporting, emergency response, planning, and assessment, for fuel reduction projects in the San Bernardino Unit.

B. ENGINEERING & STRUCTURE IGNITABILITY

1. Continue to oversee the application of Public Resources Code Section 4290 and Title 14 of the California Code of Regulations Section 1270 on all private lands classified as SRA.
2. In addition to the 4290 requirements, local Schedule A contracts have established preplans for commercial occupancies as well as business inspections of those occupancies.
3. Continue to work with the Cities and Agencies within the unit to enforce the California Code of Regulations (CCR), Title 24, and Part 2, known as the 2016 California Building Code (CBC). Along with maintenance and periodical updating of the Fire Hazard Severity Zones within State Responsibility Areas, any Local Agency Very-High Fire Hazard Severity Zone maps.
4. Continue an aggressive LE-100 program to advise property owners of the need for defensible space around their structures. Clearing vegetation and maintaining that clearance is required by section 4291 of the Public Resources Code. Additionally, we are working with our cooperators in sensitive areas to conduct defensible space inspections and training within their jurisdiction on SRA lands.

C. INFORMATION AND EDUCATION

1. Increase efforts in educating the public regarding debris burning, campfires, and equipment use.
2. Increase PSA’s and news releases regarding the laws covering campfires and debris burning along with proper equipment use in fire prone areas.
3. Continue efforts to maintain the message of child fire safety.

RPC 3(e)(iv)
4. Continue public outreach at San Bernardino County Fair, Tri County Fair, Mule Days, Wrightwood Wildfire and Disaster Awareness fair and other like events.
5. Continue News Media Fire Safety program.
7. Assist Battalions with Team Teaching Program.
8. Recruit and Maintain personnel for the VIP Program. A necessity to assist the Unit in a variety of Fire Prevention Activities.
9. Continue to utilize the San Bernardino Unit web page, Facebook, Instagram and Twitter.

D. VEGETATION MANAGEMENT

1. Maintain the cooperative agreement with the Mountain Re-Leaf reforestation program.
2. Maintain and train personnel on the Units Post Suppression Rehabilitation program.
3. Continue to conduct Forest Practice inspections pursuant to the Forest Practices Act. The inspections are performed to ensure fuel reduction and logging operations are conducted per state law in a manner that protects all the resources in a forest environment.
4. Continue to work with the Mountain Area Safety Taskforce (MAST) and Fire Safe Councils on the best utilization of fuel projects for community defense, along with the best use of CAL FIRE resources including hand crews and resource personnel for these projects.
5. Facilitate development of programs and projects to utilize grant monies for fire prevention projects.
SECTION V: PRE-FIRE MANAGEMENT TACTICS
DIVISION / BATTALION / PROGRAM PLANS

BATTALION 1:

OVERVIEW
Battalion 1 consists of two CAL FIRE stations (FFS) and three Schedule A fire stations. The Chino Hills FFS and Devore FFS are each one engine stations, typically open during transitional and peak staffing. The Highland, East Highland, and Sterling Fire Stations are staffed with a Type I ALS engine at each station. Each Highland engine is staffed with 3 personnel.

The Southern border for Battalion 1 is the Riverside County line, the Eastern border is the Yucaipa Battalion (Battalion 3), the Northern border is the San Bernardino National Forest and the Western border is the Los Angeles County Line. The Highland Battalion is comprised of the Southwestern and South-central portion of the CAL FIRE San Bernardino Unit.

The local and federal agency fire districts/departments within Battalion 1 are the San Bernardino National Forest, the San Manuel Fire Department, the Redlands Fire Department, the Loma Linda Fire Department, the Colton Fire Department, the San Bernardino County Fire Department, Rancho Cucamonga Fire Department, Rialto Fire Department, and the CAL FIRE Riverside Unit / Riverside County Fire Department. A close working relationship is maintained with each district as well as with the United States Forest Service (USFS).

The following is a list of cooperative agreements as well as some local response agreements:

1. In Battalion 1 the City of Redlands, City of Colton, City of Loma Linda, City of Chino, City of Rancho Cucamonga and the City of Chino Hills all have a wildland fire protection agreement with CALFIRE.

2. The City of Highland contracts with CAL FIRE for full service Fire Protection and Paramedic Services (Schedule A).

3. There have been numerous wildland fires in the south-west area of Battalion 1 that affects many of the surrounding jurisdictions. Specifically, the areas within Hwy 71, Carbon Canyon, Tonner Canyon, Hwy 91, Hwy 57. This area has come to be known as the SOLAR area. The SOLAR term is derived from San Bernardino, Orange, Los Angeles, and Riverside counties. A great amount of cooperation and coordination amongst agencies with jurisdictional responsibility has been accomplished to put together a pre-plan for fire response into the areas served by the many fire departments that protect the area. This pre-plan identifies a process and pre-designates a common communication plan that all responding agencies have agreed to utilize for all initial attack wildland fire response that has a potential to go to extended attack in the SOLAR area. This has come to be known as the SOLAR Plan by those agencies. Over the past several years the departments have worked to streamline the plan and have participated in a series of wildland fire response drills to practice the applicability of the SOLAR Plan.

4. The Rancho Cucamonga Fire Department, CAL FIRE-San Bernardino Unit, San Bernardino County Fire, and the San Bernardino National Forest have a response
agreement for wildland fires in the front country along the base of the San Gabriel Mountains from San Antonio Heights to the east towards Fontana. This plan, similar to the SOLAR plan mentioned above, assists the responding agencies with common communications as well as pre-identifying a Unified Ordering Point. Annual training drills keep all involved agencies familiar with the process.

Elevations within Battalion 1 vary from 500 feet around the Prado Flood Control basin up to 3000 feet above sea level along the front country of the eastern San Gabriel Mountain Range and the San Bernardino Mountain Range. Fuel types within the Battalion are primarily grasses consistent with Fuel Model 1 and 2 and shrubs consistent with Fuel Model 5 and 6 in the SRA. The fuel model numbers are derived from Hal Anderson Aids to Determining Fuel Models guidelines.

Fire History in the Highland Battalion is very extensive. Notable fires in the last decade include the Florida Fire which burned 450 acres of brush, the Mart Fire which burned 900 acres and resulted in evacuations of approximately 200 area homes and a temporary road closure of Highway 330, and the Bridge Fire which burned 450 acres and temporarily closed Greenspot Road for ½ a mile.

The protection of the watershed areas in the Highland Battalion is essential in protecting and enhancing life, property and infrastructure. On December 22, 2010, a massive mud and debris flood engulfed several neighborhoods in the City of Highland. The protection of the wildland areas is critical to reduce the flooding potential in the Highland Battalion. The urban interface areas spanning across the battalion presents a major concern and challenge to fire personnel when defending structures from wildland fire. An active program for conducting inspections by fire personnel helps the home and business owners to be compliant with the requirements set forth in section 4291 of the Public Resources Code. Several major Freeways run through the Highland Battalion. The Inland Empire, which is the location of the Highland Battalion, has a population of approximately two million people. The heavy population increases the potential for accidental and arson caused fires.

Communities at Risk listed by the California Fire Alliance within the Highland Battalion include: City of Chino, City of Chino Hills, Devore, Devore Heights, City of Ontario, City of Montclair, City of Upland, City of Rancho Cucamonga, City of Fontana, Lytle Creek, Mt. Baldy Village, San Antonio Heights, City of Rialto, Muscoy, Bloomington, City of San Bernardino, Mentone, City of Redlands, City of Loma Linda and the City of Colton.

PRIORITIES:

A. 4291 Public Resources Code Inspections in the SRA and City of Highland Municipal Code in the LRA:
   1. Identify high risk areas based on fuel load, road access, and inspection compliance history to identify areas of focused inspections for each Battalion.
      • Conduct inspections
      • Provide educational material to stakeholders and property owners
      • Non-compliance on 3rd inspection results in legal action (citation)

This on-going project will hold stakeholders responsible for meeting the requirements of 4291 as defined in the Public Resources Code. It will also increase the chance of a
favorable outcome in the event of wildfire, and provide defensible space for fire suppression personnel to work, while increasing the margin of safety for firefighters and equipment.

B. Public Education – Debris Burning:
   1. Provide education material to permit holders for debris burning
   2. All project areas will be pre-inspected prior to issuance of a burn permit.
   3. Aggressive law enforcement (citation) for burning without a permit.
   4. Aggressively seek cost recovery when fire has escaped the project area requiring fire suppression action.

C. Public Education – Use of Equipment:
   Provide Public Education and information. Lack of knowledge of the specific laws related to open burning and Use of Equipment is often cited by violators as the reason for debris burning violations. Fire Safety and Disaster Preparedness Public Venues for educating the public will be utilized at every opportunity.

D. Fire Prevention Signs:
   Increase the number of roadside fire prevention education signs. The roadside fire prevention message reaches many people entering State Responsibility Lands when strategically placed along major thoroughfares.

E. Fuels Reduction:
   There are numerous ongoing fuel reduction projects within the Highland Battalion that are being accomplished through many Fire Safe Councils and other entities that have the means to complete this type of work. Fuel reductions have proven very successful in protecting and enhancing life, property and infrastructure.

Fuel reduction along the identified corridors and Wildland Urban Interface perimeter can help reduce the number of roadside fires started by vehicles and discarded burning materials, insures roads used for access and egress do not have fuel loads immediately adjacent to the roadway and provides defensible areas to slow or stop the rate of fire spread. Some priority Battalion 1 project areas are identified as follows:

- Construct and improve fuel reduction programs that border West End Operational Plan Cooperators DPA.
- Construct and Improve Fuel Reduction programs that border SOLAR response area.
- Construct and Improve Fuel Reduction programs that border the San Bernardino National Forest.
- Improve access roads such as power line roads, truck trails, and hiking trails.
- Undertake projects and activities that would reduce roadside starts and provide defensible space along roadways.
- Ensure a data tracking system is used and shared with all personnel down to the field level.

RPC 3(e)(iv)
F. High Priority Areas:
   • Devore Heights
   • San Antonio Heights
   • Chino Hills
   • Chino Wildland Contract areas - surrounding State Responsibility Areas in Orange, Los Angeles and Riverside counties.
   • State Responsibility Areas north of Rancho Cucamonga

G. Public Outreach:
   1. Organized Venues for Public Education within the Highland Battalion.
      • Station tours at all three Highland Fire Stations.
      • School programs at multiple education levels throughout the battalion.
      • Annual Citrus Harvest Festival.
      • Annual Open House at all three Fire Stations.
      • Safety Fairs in Carbon Canyon.
      • Actively engage in Fire Safe Council Meetings:
COLLABORATION:

BATTALION 2:

OVERVIEW
The Desert Battalion boundary starts at the San Bernardino Unit/ Riverside County line in Morongo Valley, and runs north and west to the Los Angeles County Line in Pinon Hills along east/north side of the mountain range separating the High Desert from the Inland Empire. The battalion includes State Responsibility Area land (SRA) in and around the communities of Morongo Valley, Yucca Valley, Joshua Tree, Pioneertown, Flamingo Heights, Landers, Johnson Valley, Lucerne Valley, Apple Valley, Victorville, Hesperia, Summit Valley, Wrightwood, Phelan, and Pinon Hills. The Battalion extends from Highway 18 in the north, to the San Bernardino National Forest boundary in the south. The Battalion covers an approximate area of 600 square miles. In addition to CAL FIRE resources other fire departments providing mutual aid include the San Bernardino County Fire Department, Victorville Fire Department, United States Forest Service from the San Bernardino and Angeles National Forest, California Desert District of the Bureau of Land Management, Apple Valley Fire Protection District, National Park Service, and the Morongo Valley Community Services District Fire Department. During times of major fires in the Morongo Valley mutual aid has also been received from the 29-Palms Fire Department and the Marine Corps Air Ground Combat Center in Twenty-Nine Palms. It is also noteworthy that the City of Victorville is in the process of forming their own City run Fire Department that will about the SRA on its South and West borders.

The elevations in the battalion range from 2700 feet to 5700 feet, and is considered the “High Desert” with the presence of Joshua trees generally defining the boundaries of the Mojave Desert. Climatic temperatures range from the low teens to single digits in the winter with temperatures exceeding 105 during the summer months. Annual rainfall is less than 13 inches a year. Vegetation fuel types include annual grass, a variety of brush, juniper, Joshua trees, manzanita, timber and other drought resistant vegetation with low fuel moisture content making these species highly susceptible to, and capable of carrying fire, especially when fanned by the high winds typical to the desert.

There is a common boundary between California Department of Forestry & Fire Protection, San Bernardino Unit (CAL FIRE/BDU) and Los Angeles County Fire (LAC) which has developed the LABER Operating Plan. The purpose of this LABER Operating Plan is to enhance coordination of wildland fire ground operations, pre-designate areas, create a Unified Ordering Point, and radio frequencies. This plan creates a Unified Command Structure, dependent upon DPA and greatest threat to those agencies for all fire that fall with the affected areas.

Notable fires during the last decade include the North Fire in 2015 burning 4250 acres near I-15 and south of Oak Hills. In 2016, the Pilot Fire burned 8110 acres in the Summit Valley area and the Blue Cut Fire burned 36,274 acres in the West Cajon Valley, Phelan and Oak Hills communities.

During peak staffing levels the Desert Battalion staffs five fire engines at four fire stations spread across the battalion with locations in Yucca Valley, Lucerne Valley, Apple Valley and Phelan. The United States Forest Service also staffs one fire engine at CAL FIRE’s Lucerne fire station. The total CAL FIRE personnel vary from 40 fire suppression personnel during peak staffing to 11 personnel during the low fire danger period of the winter months when typically, only the Phelan fire station remains open. The urban interface areas spanning across the battalion presents a major concern and challenge to fire personnel when defending structures from wildland fire. An active program for conducting inspections by company officers helps the home and business owners to be compliant with the requirements set forth in section 4291 of the Public Resources Code.
Communities at Risk listed by the California Fire Alliance (*see reference below) within the desert battalion include Morongo Valley, Pioneertown, Joshua Tree and Yucca Valley in the southern half of the battalion, and Pinon Hills, Phelan Wrightwood, Cajon (west Cajon Valley) and Summit Valley at the north end of the battalion.

* Reference http://www.cafirealliance.org/communities_at_risk

PRIORITIES:

A. 4291 Public Resources Code Inspections
   1. Identify high risk areas based on fuel load, road access, and inspection compliance history to identify areas of focused inspections for each Battalion.
      - Conduct inspections
      - Provide educational material to stakeholders and property owners.
      - Non-compliance on 3rd inspection results in legal action (citation).

   This on-going project will hold stakeholders responsible for meeting the requirements of 4291 as defined in the Public Resources Code. It will also increase the chance of a favorable outcome in the event of wildfire, and provide defensible space for fire suppression personnel to work, while increasing the margin of safety for firefighters and equipment.

B. Public Education –
   1. Debris Burning
      - Provide education material to permit holders for debris burning.
      - All project areas will be pre-inspected prior to issuance of a burn permit.
      - Aggressive law enforcement (citation) for burning without a permit.
      - Aggressively seek cost recovery when fire has escaped the project area requiring fire suppression action.

   2. Use of Equipment
      - Reduce fires caused using equipment.
        1) Provide Public Education and information.
        2) Aggressively seek cost recovery when fire has escaped the project area requiring fire suppression action.

   Lack of knowledge of the specific laws related to open burning and Use of Equipment is often cited by violators as the reason for debris burning violations. Fire Safety and Disaster Preparedness Public Venues for educating the public will be utilized at every opportunity.

   3. Juvenile Fire Safety
      - Reduce fires caused by juveniles
      - Provide fire prevention educational material to school classrooms.

   4. Organized Venues for Public Education within the Desert Battalion.
      - Wrightwood Wildfire and Disaster Awareness Day
      - San Bernardino County Fair, Victorville
      - Grubstakes Day, Yucca Valley
- Fiesta Days, Morongo Valley
- Home Depot, Yucca Valley
- 4th of July parades, Lucerne Valley and Phelan
- Phelan Phamily Phun Days Parade, Phelan
- High Desert Safety Fair, Target Shopping Center, Hesperia
- Summit Leadership Academy – training with cadets, Hesperia
- Crafton Hills College – training with cadets
- Copper Mountain College – training with cadets
- Victor Valley College-training with cadets

C. Fire Prevention Signs
   1. Increase the number of roadside fire prevention education signs.
      - The roadside fire prevention message reaches many people entering State Responsibility Lands when strategically placed along major thoroughfares.

   ![](image)

   **Hwy 18 – Lucerne Community**

D. Fuels Reduction
   1. Reduce hazardous fuel
      - Fuel reduction along the identified corridors and perimeter can help reduce the number of roadside fires started by vehicles and discarded burning materials, insures roads used for access and egress do not have fuel loads immediately adjacent to the roadway and provides defensible areas to slow or stop the rate of fire spread.
      - There has been an increase in bark beetle activity and associated mortality, in the Wrightwood mountain area particularly and across the mountain areas in general. The increased activity is expected to continue as drought conditions persist.

   2. Community Chipper program
      - Develop a program for fuels reduction via chipping excess rural/residential vegetation rather than burning. This method would also reduce atmospheric carbon release and could be considered a “green” alternative to debris burning. The program can be focused in the High and Very High Fire Hazard Severity Zones within the SRA.
E. High Priority Areas:
   - Wrightwood/Pinon Hills
   - Oak Hills
   - Morongo
   - Pioneertown
   - South Apple Valley
   - Lucerne Valley
   - Phelan/Baldy Mesa
   - West Cajon Valley
   - Summit Valley

COLLABORATION:

The Yucaipa Battalion boundary starts at the Southern edge of San Bernardino County along County Line Road separating the San Bernardino and Riverside Units. The battalion includes State Responsibility Area land (SRA) in and around the communities of Yucaipa, Calimesa, Oak Glen, Cherry Valley, Mentone, Redlands, San Timoteo Canyon, Live Oak Canyon, Highland, and numerous mountain communities within the San Bernardino National Forest. The battalion boundary follows the confines of San Timoteo Canyon Road and Live Oak Canyon Road on the Western edge, the cities of Redlands, Highland, and Mentone on the North following the footprint of the Santa Ana River, and within the San Bernardino National Forest boundary along the Riverside County Line on the East and South. The battalion covers an approximate area of 296 square miles. The Yucaipa battalion also includes an ongoing fire service contract with the City of Yucaipa to include three permanent traditionally staffed Type I Paramedic fire engines providing all risk emergency fire and medical service incorporating 21 square miles within the city limits. In addition to CAL FIRE resources other fire departments providing mutual aid include the San Bernardino County Fire Department, United States Forest Service from the San Bernardino National Forest, City of Redlands, and the City of Calimesa Fire Department.

The elevations in the battalion range from 1346 feet to 9113 feet, and is considered the “Yucaipa Valley” with the presence of multiple mountain ranges bordering the north and eastern edges of the battalion to the San Bernardino National Forest. Climatic temperatures range from in the low twenties in the winter with temperatures exceeding 105 during the summer months. Annual rainfall averages 19.33 inches a year. Vegetation fuel types include annual grasses and a variety of brush with low fuel moisture content making these species highly susceptible to, and capable of carrying fire, especially when fanned by the high winds typical to the Santa Ana wind events generally starting in the last months of any given year.

Notable fires during the last decade include the 2013 Mill fire burning 263 acres in the Crafton Hills area. Several additional notable fires on the Yucaipa Ridge area bordering the USFS/BDF boundary have occurred throughout the past decade, most named Bryant Fires (1,2, etc.). These extended attack fires started within Battalion 3 and involved SRA, LRA, FRA, or a combination of the three and were unified command fires involving neighboring fire departments and utilized local agreements already in place.

During peak staffing, the Yucaipa Battalion staffs two Type III State fire engines at one fire station within the City of Yucaipa. That station is shared with a Type I Paramedic Engine, while two additional Type I Paramedic Engines are staffed at two separate stations for a total of 3 fire stations within the Battalion.

The urban interface areas spanning across the battalion present a major concern and challenge to fire personnel when defending structures from wildland fire. An active program for conducting inspections by company officers helps the home and business owners to be compliant with the requirements set forth in section 4291 of the Public Resources Code.

Communities at Risk listed by the California Fire Alliance within the Yucaipa Battalion include the City of Yucaipa, Oak Glen, Mentone, Redlands and Highland, Mountain Home Village, Forest Falls, Angeles Oaks, Seven Oaks, Heartbar and numerous seasonal camp facilities.
PRIORITY:

A. 4291 Public Resources Code Inspections:

1. Identify high risk areas based on fuel load, road access, and inspection compliance history to identify areas of focused inspections for each Battalion.
   - Conduct inspections
   - Provide educational material to stakeholders and property owners.
   - Non-compliance on 3rd inspection results in legal action (citation).

This on-going project will hold stakeholders responsible for meeting the requirements of 4291 as defined in the Public Resources Code. It will also increase the chance of a favorable outcome in the event of wildfire, and provide defensible space for fire suppression personnel to work, while increasing the margin of safety for firefighters and equipment.

B. Public Education –

1. Debris Burning
   - Provide education material to permit holders for debris burning.
   - All project areas will be pre-inspected prior to issuance of a burn permit.
   - Aggressive law enforcement (citation) for burning without a permit.
   - Aggressively seek cost recovery when fire has escaped the project area requiring fire suppression action.

2. Use of Equipment
   - Reduce fires caused using equipment.
     1) Provide Public Education and information.
     2) Aggressively seek cost recovery when fire has escaped the project area requiring fire suppression action.

Lack of knowledge of the specific laws related to open burning and Use of Equipment is often cited by violators as the reason for debris burning violations. Fire Safety and Disaster Preparedness Public Venues for educating the public will be utilized at every opportunity.

C. Fire Prevention Signs

1. The Yucaipa Battalion currently has two fire prevention and education signs. Locations of the two signs are:
   - Oak Glen Rd. East of Pendleton Rd.
   - Oak Glen Rd. at Wildwood Canyon Rd.

2. The Yucaipa battalion also displays two Golden Spotted Oak Borer signs:
   - Oak Glen Road, East of Pendleton Road
   - Wildwood Canyon Rd, East of Morningside Dr.

The roadside fire prevention message reaches many people entering State Responsibility Lands while strategically placed along major thoroughfares.

D. Fuels Reduction

1. Oak Glen area on the Mile-High fuel break, mechanical treatment and pile burning.

RPC 3(e)(iv)
2. Yucaipa’s North Bench area following the toe of the Yucaipa ridge slope, mechanical treatment and pile burning.
3. Crafton Hills area along the Crafton Hills Truck Trail from Yucaipa Regional Park to Crafton Hills College.
4. Pisgah Peak truck trail, mechanical treatment and pile burning.
5. Yucaipa Ridge through cooperation with the United States Forest Service San Bernardino National Forest, mechanical treatment and pile burning.

Fuel reduction along the identified corridors and perimeter can help reduce the number of roadside fires started by vehicles and discarded burning materials, insures roads used for access and egress do not have fuel loads immediately adjacent to the roadway, and provides defensible areas to slow or stop the rate of fire spread.

E. High Priority Areas:
   - Oak Glen
   - Forest Falls
   - Mountain Home Village
   - Crafton Hills

F. Organized Venues for Public Education within the Yucaipa Battalion
   1. Station tours at all three stations.
   2. School programs at multiple education levels throughout the city including the Law and Public Safety Academy at Yucaipa High School.
   3. CERT program – Community Emergency Response Team
   4. Annual Emergency Disaster Preparedness Expo at the Yucaipa Community Center.
   5. Annual Yucaipa Bike Rodeo at the Yucaipa Community Center.
   7. Hands only CPR program at multiple events city wide.
   8. Also, Yucaipa General Plan revised to include multiple revisions in the safety element regarding development and fire standards, fire restrictions, etc. on the fireside.
**COLLABORATION:**

*Wildwood Canyon Road*
BATTALION 4:  
OVERVIEW
The Owens Valley Battalion lies in the San Bernardino/Eastern Sierra Division, north of San Bernardino County along the Highway 395 corridor. The valley is surrounded by the White Mountain Range and the Inyo Mountain to the east with peaks as high as 14,286 feet and the Sierra Nevada’s on the west with peaks as high as 14,375. The Owens Valley is well known for its outdoor recreation, and boast’s world class fishing, snow skiing, hiking and camping which draws a crowd through the holiday season and the weekends that increases the local population by an estimated 30,000. The Battalion encompasses the counties of Inyo and Mono, which protects 540,000 acres of SRA lands in and around the communities of Bishop, Big Pine, Starlite, Rovana, 40 Acres, Mustang Mesa, Independence, Aspendell, South Fork, Lone Pine, Keeler, Cartago and Ollancha in Inyo County, and Paradise, Toms Place, Swall Meadows, Benton, Chalfant, and Crowley Lake in Mono County. The Battalion also provides basic fire and rescue protection to the Manzanar National Monument, located four miles south of Independence along the Highway 395 corridor.

The Owens Valley is considered a deep valley bottom, with varied deep canyon drainages extending down the mountain slopes from the Sierra Nevada Mountain Range on the west and the White and Inyo Mountain Range on the east. With an average annual rainfall of 6 to 8 inches the Owens Valley is considered by most to be rain sheltered. The fuels within the Battalion consist of timber transitioning to juniper, pine and sage bitterbrush in Mono County, to scattered sage and rabbit brush with salt grass understory and a tule base around the riparian areas in the valley floor and heavy sage with rabbit brush and bitterbrush along the western slopes in Inyo County. The local winds in the area are very susceptible to change and are influenced by terrain to such an extent that any given area can be opposite of what you might expect. Diurnal changes are extreme and strong, down slope winds can be expected, driving wildland fires rapidly downhill and across the flats. Flame lengths of 15 to 60 feet have been observed and rates of spread 10,000 feet per hour in the sage have been observed during periods of high winds with spotting as far as 3/4 miles.

Notable fires in the area include the Onion Fire in August 1985 burning 10,000 acres, the Pole Fire in June 1995 burning 5,000 acres, the Tom Fire in September 1997 burning 3,500 acres, the Mazourka fire in December 1998 burning 1000 acres, the Division Fire in March 1999 burning 1,000 acres, the Birch Fire in July 2002 burning 2,500 acres in the community of Swall Meadows, the Airport Fire in March 2002 burning 1,280 acres, the Inyo Complex in July 2003 burning 10,000 acres, the Goodale fire in June 2006 burning 3,750 acres, the Inyo Complex in July of 2007 burning 35,176 acres the Fort Fire in February 2008 burning 1000 acres, the Oak Creek Mud Slide in July of 2008 within the community of Independence, the Bluff fire in March 2008 burning 1,000 acres, and the Forks fire in July 2009 burning 1,000 acres in the Bishop area, the Center fire burning 850 acres in and around the community of Big Pine, and the Round fire in February 2015 burning 700 acres in and around the communities of Paradise and Swall Meadows. Already in 2018, the Pleasant Fire in February burned 2200 acres in the Bishop area.

During peak staffing levels the Owens Valley Battalion staffs one fire engine in the Bishop area, and one engine in the community of Independence. The Battalion also has the Owens Valley Conservation Camp within the Bishop Area which has five type 1 hand crews and one dozer. The wildland urban interface area spans across the battalion and presents a major concern and challenge for fire personnel when defending structures from an encroaching wildland fire. An active program for conducting defensible space inspections by company officers helps the home and business owners...
to be compliant with the requirements set forth in section 4291 of the Public Resource Code.

Communities at Risk listed by the California Fire Alliance within the Owens Valley Battalion include Olancha, Mustang Mesa, Independence, Lone Pine, Cartago, Big Pine, Starlite, Aberdeen, Bishop, West Bishop, Aspendell, Whitney Portal, Swall Meadows, Tom’s Place, Mammoth Lakes, Paradise Camp, Mono City, Lee Vining, June Lake, Antelope Valley East, Bridgeport and Coleville.

**PRIORITIES:**

A. 4291 Public Resources Code Inspections:

1. Identify high risk areas based on fuel load, road access, and inspection compliance history to identify areas of focused inspections for each Battalion.
   - Conduct inspections
   - Provide educational material to stakeholders and property owners.
   - Non-compliance on 3rd inspection results in legal action (citation).

This on-going project will hold stakeholders responsible for meeting the requirements of 4291 as defined in the Public Resources Code. It will also increase the chance of a favorable outcome in the event of wildfire, and provide defensible space for fire suppression personnel to work, while increasing the margin of safety for firefighters and equipment.

B. Fire Prevention Signs

1. Increase the number of Fire Prevention Signs.
2. Replace existing signs with new signs and new prevention messages.

C. Fuels Reduction

1. Identify areas within the Communities at Risk to establish Shaded Fuel Reduction Zones.
2. The Wheeler Crest Fuels Reduction Project is a Fire Prevention Fee Grant funded project within the community of Swall Meadows for roadside chipping and fuel break construction.
3. Lee Vining - Fuels reductions surrounding the community.
4. Wilkerson Fuel break is reducing fuels surround the community of Wilkerson utilizing cutting and chipping.

D. Vegetation Management Program

1. Continue to work with the local Fire Safe Councils, Resource Management and Los Angeles Department of Water and Power to identify areas of high risk, to reduce fuel
loading within identified Communities at Risk, and enhance wetland habitat by select
project burning. The VMP projects will include:

- June Lake— Fuel reduction along Hwy 158, in cooperation with the June Lake
  Fire Safe Counsel. The project is funded by the FPF.
- Benton Springs- Fuel reduction/Habitat improvement
- Calvert Burn Project- Reduce fuel loads below Aberdeen Station Road along the
  western flank of the Owens River riparian corridor. 199 Acres.
- Center Burn Project- Reduce fuel loads between Big Pine and Bishop along the
  western flank of the Owens River riparian corridor. 290 Acres.
- “PENDING”Artesian VMP- 1000 Acres just outside of Independence.

E. Public Education –

1. Debris Burning
   - Provide education material to permit holders for debris burning.
   - All project areas will be pre-inspected prior to issuance of a burn permit.
   - Aggressive law enforcement (citation) for burning without a permit.
   - Aggressively seek cost recovery when fire has escaped the project area
     requiring fire suppression action.

2. Use of Equipment
   - Reduce fires caused using equipment.
     1) Provide Public Education and information.
     2) Aggressively seek cost recovery when fire has escaped the project
        area requiring fire suppression action.

Lack of knowledge of the specific laws related to open burning and Use of Equipment is often cited
by violators as the reason for debris burning violations. Fire Safety and Disaster Preparedness Public
Venues for educating the public will be utilized at every opportunity

F. Organized Fire Prevention Activities for Public Education within the Owens Valley Battalion

1. Participate in Fire Prevention Activities for Public Education.
2. Work with our cooperators to provide Public Education. (Smokey Bear program with
   the Inyo National Forest).
3. Work with the local communities to make available Public Education materials for
   Fire prevention awareness and program development.
4. Bishop Mule Days – Fire Prevention display

RPC 3(e)(iv)
5. County General Plan - As one of the first Units in the state to do so, the San Bernardino Unit reviewed the Inyo County General plan as it relates to development in State Responsible Areas (SRA).

RPC 3(e)(iv)
**BATTALION 6:**

**OVERVIEW**

As part of the collaborative California Cooperative Wildland Fire Management and Stafford Act Response Agreement (CFMA) process, the 2013 review identified that a Direct Protection (DPA) adjustment was necessary to re-align the DPA to the mission of each agency. The mission of the Federal agencies is to manage and protect national forest and public lands and to protect lands under cooperative agreement with other wildland fire agencies. The mission of CAL FIRE is to protect the state, private and federal lands under the cooperative agreement and, where appropriate, provide local government fire protection services. The result of this review, CAL FIRE assumed DPA for 32,542 acres in the San Bernardino mountain area. This additional acreage was assumed in the San Bernardino Unit without additional budget/staffing increase. The additional acreage added 35,000 parcels that are subject to LE-100 inspections. The re- alignment of the DPA will not impact the level of response to wildland fires. The response to wildland fires will continue to be immediate, decisive and aggressive.

In 2013, CAL FIRE assumed the direct protection of areas of SRA in the San Bernardino Mountains. The Mountain Battalion 6 boundary ranges from Crestline to the Mountain Home Village, with four fire stations covering during the summer months located in Crestline, Sky Forest, Running Springs and Baldwin Lakes. CAL FIRE has always enjoyed good relationships with community groups in the past. It is our hope to expand our relationship with additional groups in the mountain communities.

Recently, bark beetle activity and associated tree mortality, in the mountain areas of San Bernardino County, is increasing and is expected to continue as drought conditions persist.

The San Bernardino Mountains are a high and rugged mountain range in Southern California. Situated north and northeast of San Bernardino, the range tops out at 11,489 feet (3,502 m) at San Gorgonio Mountain (the tallest peak in Southern California). The San Bernardino Mountains form a significant region of wilderness and are popular for hiking and skiing.

There are several mid-sized to large towns in the mountains themselves, including Big Bear City, Crestline, Lake Arrowhead and Running Springs. Communities within the San Bernardino Mountains have a total population of approximately 44,000, with this number sometimes increasing tenfold during peak tourist season. Several regional streams and rivers also have their headwaters in the mountains, the principal being the Santa Ana River, watershed which runs westwards into the Pacific Ocean through Orange County. Other streams flowing off the mountains include the Whitewater River, flowing southeast through the Coachella Valley into the Salton Sea, and the Mojave River, which drains northwards into the Mojave Desert.

Fire History in the San Bernardino Mountains is extensive. The historic Panorama Fire in 1980, burned 23,800 acres, destroyed 280 homes, damaged 49 homes, caused 4 civilian deaths, and 77 injuries. The Old Fire in 2003, burned 91,281 acres, destroyed 993 homes and caused 6 deaths. The fire threatened San Bernardino and Highland, as well as the mountain resort communities of Cedar Glen, Crestline, Running Springs and Lake Arrowhead and forcing upwards of 80,000 residents to evacuate their homes. In 2007, the Slide Fire burned 12,759 acres, and the Grass Valley Fire burned 1,247 acres. In 2015, the Lake Fire burned 31,359 acres.

RPC 3(e)(iv)
PRIORITIES:

A. 4291 Public Resources Code Inspections:
   1. Identify high risk areas based on fuel load, road access, and inspection compliance history to identify areas of focused inspections for each Battalion.
      - Conduct inspections LE100 for approximately 35,000 parcels
      - Provide educational material to stakeholders and property owners.
      - Non-compliance on 3rd inspection results in legal action (citation).

   This on-going project will hold stakeholders responsible for meeting the requirements of 4291 as defined in the Public Resources Code. It will also increase the chance of a favorable outcome in the event of wildfire, and provide defensible space for fire suppression personnel to work, while increasing the margin of safety for firefighters and equipment.

B. Public Education –
   1. Illegal Burning
      - Provide education material to permit holders for burning (cooking and warming fires).
      - All areas will be pre-inspected prior to issuance of a burn permit.
      - Aggressive law enforcement (citation) for burning without a permit.
      - Aggressively seek cost recovery when fire has escaped requiring fire suppression action.

   2. Use of Equipment
      - Reduce fires caused by use of equipment.
         1) Provide Public Education and information.
         2) Reach out to cooperating agencies who routinely use equipment and perform hot work in the SRA. (Cal Trans, County Roads and water districts.)
         3) Properly permit all hot work (Welding, Cutting and Grinding) within the SRA.
         4) Aggressively seek cost recovery when fire has escaped the project area requiring fire suppression action.

   Lack of knowledge of the specific laws related to open burning and Use of Equipment is often cited by violators as the reason for debris burning violations. Fire Safety and Disaster Preparedness Public Venues for educating the public will be utilized at every opportunity

C. Fuels Reduction and Fire Prevention
   Fuel reduction projects will be identified for future planning with local Fire Safe Councils, BDU resource management, and local cooperators. Once established, the fuel reduction along identified corridors and perimeter can help reduce the number of roadside fires started by vehicles and discarded burning materials. This will help ensure roads used for ingress and egress, do not have fuel loads immediately adjacent to the roadway and provides defensible areas to slow or stop the rate of fire spread. CAL FIRE crews are taking an active role in reducing the severity and spread of the bark beetle and associated
mortality by felling and then treating the downed material.

Ongoing and future projects:

- The Forest Lawn Scout Ranch in Lake Arrowhead.
  - Amend the current project to include pile burning to increase production.

- Loch Leven Camp VMP in Mountain Home Village
  - Future project that will augment a current NRCS fuels project with pile burning and broadcast burning.

- Possible VMP project with Redlands Water District east of Mountain Home Village. This would include manual fuel reduction, pile burning and broadcast burning.

- We plan to continue to actively seek out and engage land holders in the SRA with the goal of creating new VMP projects and reducing the overall fuel load within the SRA.

- The Sawmill fuels reduction project near Lake Arrowhead.

- Communication Site fuels reduction. A joint project to maintain clearance around the many repeater sites throughout the Battalion.

- Continual hazard tree removal due to drought and bark beetle mortality.

D. Organized Venues for Public Education
   - Participate in Venues for Public Education

E. High Priority Areas:
   - Crestline
   - Valley of Enchantment
   - Cedar Pines Park
   - Lake Arrowhead
   - Running Springs
   - Big Bear
   - Mill Creek Canyon

TRAINING BUREAU:

OVERVIEW
The Training Program in the San Bernardino Unit is responsible for meeting and maintaining all the industry standard mandates for all personnel assigned to the Unit.

It is the San Bernardino Unit’s goal to maintain highly trained personnel and reduce the frequency and severity of all workplace illnesses and injuries. The Unit Training Program supports all the personnel that are responsible for staffing and protecting the below:

- The State Responsibility Areas in the counties of San Bernardino, Inyo and Mono that include 903,000 acres of direct protection area.
- The State Responsibility Areas in the Contract County of Los Angeles that include 505,000 acres of direct protection area.
- Full Service Fire Protection and Paramedic Services in the Cities of Yucaipa and Highland.
- Wildland Fire Protection Agreements with the Cities of Redlands, Colton, Loma Linda, Chino and Chino Hills, and Rancho Cucamonga that include 23,502 acres of protection area.
- Dispatching Contracts for six agencies.
- Prado Helitack Base.
- Four Conservation Camps and One Inmate Training Center.
- Thirteen State Fire Stations.
- Approximately three hundred Safety and Non-Safety Personnel.
- Work cooperatively with Crafton Hills College, Victor Valley College, The San Bernardino Public Safety Academy, and the Summit Leadership Academy to provide Fire Service education to future generations of Fire Fighters.

PRIORITIES:
A. Maintain currency of all mandatory certifications for Fire Control Personnel.
B. Ensure all Fire Control Personnel successfully complete the Basic Fire Protection Skill Certification Process (Policy 4064).
C. Ensure all Fire Control Personnel successfully complete the Unit’s Fire Preparedness Exercise.
D. Utilize the Online Target Solutions Program to increase the quality of training and reduce cost.
E. All Fire Control Personnel completed the Continued Professional Training Course.
F. Participate in the County Wide Fire Preparedness exercise.
   1. Participate in the SOLAR Exercise for the Counties of San Bernardino, Orange, Los Angeles, and Riverside.
   2. Ensure all industry standards and policies for the aviation program are maintained.
   3. Maintain compliance with the CAL FIRE Respiratory Protection Program.

*Figure 2 Large Scale Multi Incident Training*
PREVENTION BUREAU:

OVERVIEW
The Fire Prevention Bureau is involved in a variety of efforts designed to reduce the number of fire starts and limit the damages from fires that do occur. The San Bernardino Unit is unique because of the overlay of unincorporated areas and communities within State Responsibility Areas (SRA) that are protected primarily by the San Bernardino County Fire Department or independent fire districts. These local agencies have the lead in enforcing development and building codes in their jurisdiction. In Mono County, the County Government assumes that role. In both cases, CAL FIRE works cooperatively to assist local government in enforcing Title 24 and PRC 4290 in new and existing building construction.

In 2014, the San Bernardino Unit’s Fire Prevention Bureau added an additional Fire Captain Specialist, bringing to the total staffing of the Bureau to one Battalion Chief and three Fire Captain Specialist. In 2015, we filled a vacant Fire Prevention Specialist II position and now have someone to provide more oversight and work toward fire and life safety education as well as manage the Youth Fire Setter Intervention and Prevention program and the Bureau’s VIPs. Additionally, because of SB 1241 and the Fire Prevention program, the Unit was approved to hire 6 Defensible Space Inspectors (Forestry Aides). These inspectors are supervised through the Fire Prevention Bureau and will perform PRC 4291 Inspection throughout the Unit.

Utilizing a variety of methods, the Information and Education section of the Fire Prevention Bureau seeks to provide information on fire safety, PRC regulation adherence, and general safety to the public. This information is disseminated through public events and public forums as well as through the news media. At public events, the section uses a tried and true political method of personal greeting and interaction to determine if the members of the public need information and material regarding fire safety and regulations. The news media is provided information in the form of Public Service Announcements (PSA’s), and news stories. The recent development of a Unit web page as well as a twitter feed now gives the Unit multiple outlets with which to inform the public and news media about important fire and life safety information.

This section is also involved in fire and life safety education which is accomplished through public meetings and forums. While similar to information dissemination, education goes a step further through the direct teaching of fire and life safety to the public and other affected stakeholders. Because of the geographic organization of the San Bernardino Unit, there is little call for school programs since the bulk of the schools within the Unit are in overlapping jurisdictions. However, the firefighters in the contract cities of Highland and Yucaipa present Smokey Bear education programs to the schools in those communities on an annual basis. The Information and Education Section responds to more than two dozen requests for Smokey Bear fire education programs each year. This is supported by fire engine crews and the Unit’s Fire Prevention Specialist.

PRIORITIES:
A. For the Information and Education section a major priority for the next year will be increasing our efforts in educating the public regarding debris burning, campfires, and equipment use. This will be accomplished by working in conjunction with the Station personnel to provide residents and other stakeholders the appropriate information. The section will strive to
increase its output of PSA’s and news releases regarding the laws regarding campfires, debris burning and proper equipment use in fire prone areas. Educational and informational efforts will also continue with a focus on reducing fires resulting from electrical causes and youth involved fires.

B. Another priority will be the continuation of Operation Santa Ana. This program is done with the cooperation and participation of Southern California Edison. This major cooperative program has been responsible for reducing to nearly zero the number of fires caused by faulty power equipment, power lines, and improperly cleared areas around the base of power poles see PRC sections 4292 and 4293. The San Bernardino County Fair is the largest single prevention and education event that the Unit participates in on an annual basis. For the last 15 years, this Unit has been the coordinator for the Public Service area. This area is provided by the Fair at no cost to CAL FIRE San Bernardino Unit and the other governmental and non-profit organizations that participate there. Over the years, CAL FIRE has had a vested interest in making this area an important place for the public to visit.

C. Another major effort of the San Bernardino Unit is to provide fire safety information and education to the news media. The News Media Fire Safety program has been ongoing since its creation by the Unit in 2001. The continuing goal of this program is to educate members of the print and electronic news media not only in wildland fire safety, but wildland fire behavior as well. The Section annually provides reminders to the varied news organizations in the Los Angeles and Inland Empire areas about the continued need for this important safety education training.

D. SPECIAL TREATMENT AREAS 9051.5
(No. 7 September 1991)
Risk Rating Areas (RRAs) may contain smaller geographical areas of significance that a Unit may wish to predesignate as a special treatment area. This area may be unique in comparison to surrounding areas and requires a separate prescription either through public education, vegetation management, law enforcement, engineering activities, or even political treatment.

Special Treatment Areas should be identified and assigned a numerical value for integration into the Fire Prevention Plan and handled as a separate planning area. Where several Special Treatment Areas are present, they should be categorized based on three separate scores: the values at risk, risk of fire starts, and difficulty of control. Apply a rating of 1-3 to each category and total all three ratings. The highest score becomes the top priority Special Treatment Area. Lower scores may receive less emphasis, less resources, or will be addressed at a later time.

E. For the Owens Valley and northern reaches of the San Bernardino Unit, the work to provide information and education will continue. These efforts include;
1. Increasing the placement of roadside Fire Prevention Signs.
2. Increase public education regarding illegal burning and campfires.
3. Maintain CAL FIRE’s participation in Smokey Bear team teaching in local area schools, fire safety displays at the Tri County Fair Grounds during the annual Home Show and
Mule Days, and Fire Prevention Week participation in the local communities of Inyo and Mono counties.

4. Establish a partnership and participate in the Los Angeles County Fair to provide CAL FIRE’s mission of fire prevention through information and education.

RESOURCE MANAGEMENT:

Overview
Consistent with the Department’s mission, the Resource Management Division of the San Bernardino Unit (BDU) is committed to serving and safeguarding the people and protecting the property and resources of California. This is accomplished using a variety of tools including manipulation of fuels, resource protection, education, enforcement, and fire protection. Manipulation of fuels is accomplished by reducing the density and continuity of fuels while increasing overall health of the vegetation community. Supporting healthy vegetation communities must also address impacts associated with pests, diseases, and mortality. Resource protection provides this support through identification of vegetation pest and disease issues, implementation of pest and disease control efforts, and reforestation activities. Every contact that’s made with the public is an opportunity to inform them about the benefits of creating healthy, fire resistant vegetation communities in and around their neighborhoods. It’s also an opportunity to assist them in that endeavor by showing them how to do so, or by offering technical or financial assistant to accomplish the work. Enforcement of State regulations, particularly in the forest practice arena, helps ensure that the many natural resources in the wildland environment are protected now and into the future. As the need arises, Resource Management personnel are committed to supporting the fire protection and all risk mission of the Department in a role commensurate with their training and experience.

The BDU Resource Management Division is comprised of a Forester I (battalion chief rank equivalent), a Forestry Assistant II (captain rank equivalent), an Environmental Scientist, and a Pre-Fire Engineer (captain rank). Currently, all positions report directly to the Unit Chief. A Fire Captain assists Resource Management throughout the winter season to help coordinate the implementation of fuels reduction projects.

Resource Management covers all State Responsibility Area (SRA) lands within San Bernardino, Inyo, and Mono counties. While some SRA lands within the Unit are not under State Direct Protection Area (DPA) for fire, Resource Management does have a responsibility to exercise its function in all SRA lands regardless of the direct protection status.
Much of the work done by Resource Management is in the San Bernardino mountains, the eastern end of the San Gabriel mountains, and the Owens Valley. Elevations range from approximately 1200 feet at the San Bernardino valley floor to over 10,000 feet. Owens Valley is located in east-central California, between the Sierra Nevada on the west and the White Mountains on the east, and includes the area drained by Owens River and its tributaries. The Owens Valley bottom comprises the bulk of the SRA land in Inyo County, with an average elevation of 3,700 feet. The San Bernardino and San Gabriel Mountains are transverse ranges lying north of the San Bernardino and Los Angeles basins. They are characterized by a typical Mediterranean climate which can be very dry during the summer months with the bulk of precipitation coming during the winter months. The Unit was dramatically affected by five consecutive years of drought prior to the winter of 2017. 2017 through 2019 brought variable winter weather, with 2019 drought maps showing southern California out of drought conditions.

Southern California’s Mediterranean climate makes it chronically susceptible to drought conditions. The drought experienced from 2014 - 2018, as well as droughts prior to 2011, played a significant role in the large wildfires that occurred in the San Bernardino mountains over the past 20 years – the Willow Fire in 1999, Old Fire in 2003, Grand Prix Fire in 2003, Grass Valley & Slide Fires in 2007, the Lake Fire in 2015 and most recently the Pilot and Blue Cut Fires, in 2016, which burned approximately 25,000 acres in less than 24 hours.

Communities at Risk in the mountain areas include:

- Angelus Oaks
- Forest Falls
- Oak Glen
- Arrowbear
- Fawnskin
- Rim Forest
- Baldwin Lake
- Green Valley Lake
- Running Springs
- Big Bear City
- Lake Arrowhead
- Sugar Loaf

Resource Management Programs

Grants

In 2014 CAL FIRE introduced two new grant funding sources: State Responsibility Area (SRA) Fire Prevention Fee (FPF) Fund and the Greenhouse Gas Reduction Fund. In fiscal year 2017-2018, the Fire Prevention Fee was suspended until 2030 and the FPF Grant Program ended. The Greenhouse Gas Reduction Fund, now known as California Climate Investments (CCI), provides funding for the following CAL FIRE grant programs: Fire Prevention, Forest Health, Forest Legacy, California Forest Improvement (CFIP), and Urban Forestry. Ongoing CAL FIRE awarded grant projects within the Unit include:

2016 – 2017 Forest Legacy Grants:
- San Bernardino Mountains Land Trust – Arrowhead Ridge

2017 – 2018 Fire Prevention Grants
- Big Bear Fire Authority – SRA Hazardous Tree Mitigation Program
- Arrowhead Communities Fire Safe Council – Community Hazardous Fuels Reduction Projects
- Mountain Rim Fire Safe Council – Hazardous Tree Removal
- Mountain Rim Fire Safe Council – Community Chipping Program
- Mountain Rim Fire Safe Council – Living with Wildfire
- Transformation Ministries – Thousand Pines Shaded Fuel Break

2018 - 2019
- Regents of the University of California – Valentine Reserve Fuel Reduction
- Mountain Rim Fire Safe Council – Smokey Bear Prevention Education

2019 - 2020
- Mountain Rim Fire Safe Council – Abatement Assistance 2020
- Wheeler Crest Fire Protection District – Swall Meadows Fuel Reduction

Projects

Funding for Unit implemented fuel reduction, forest health, reforestation, and education projects also comes from CCI. In 2019, the Unit received a skid steer with masticator, brush rake, bucket, and grapple attachments, and a track chipper from South Region. These pieces of equipment have been put to work on several Unit projects. Current Unit projects include:

- Sawmill Fuels Reduction Project
- Hubert Eaton Scout Reservation Fuels Reduction Project
- Camp Whittle Fuels Reduction Project
- High Desert Chipping Project
- Insect Control Program (dead tree removal)
- Center VMP
- Calvert VMP
- Artesian VMP
- Dearborn Springs VMP
- Upper Little Bear Fuel Reduction Project
Crews completed the Winterton VMP prescribed burn in November 2019

Since 2007 Unit Resource Management staff has worked cooperatively with the Mountain Communities Wildfire Re-Leaf Program, administered by the Mojave Desert Resource Conservation District, reforesting burn areas or areas denuded by bark beetle infestations. Resource staff provides technical expertise to the working group for reforestation and directs crews on the ground at the time of planting. This effort is ongoing and additional work is planned for 2020 and 2021. Approximately 10,000 trees will be planted in the spring of 2020 at Camp Whittle.
Unit Resource Management assists with implementation of the California Forest Improvement Program (CFIP) program. The program scope includes the improvement of all forest resources, including fish and wildlife habitat, soil, water quality, and hazardous fuels reduction. CFIP provides technical assistance to private forest landowners, contractors, and governments agencies. Cost share assistance is provided to private forest landowners, Resource Conservation Districts, and non-profit organizations with SRA within their jurisdiction. Cost-share activities include forest management planning, tree planting site preparation, timber stand improvement, fish and wildlife habitat improvement, fuels reduction, and land conservation. Currently, the source of CFIP Fuels Reduction funds comes from the Greenhouse Gas Reduction Funds (GGRF) and the Timber Regulation and Forest Restoration Fund. The Hubert Eaton Scout Reservation, near Lake Arrowhead, received CFIP funding for the maintenance and construction of fuel breaks within the property.

The Natural Resource Conservation Service (NRCS) uses the same CFIP management plan template to meet management plan requirements for grant agreements and submits forest management plans (FMPs) to CAL FIRE for review of compliance with state laws and Forest Practice Rules. CAL FIRE provides technical expertise and FMP review for NRCS on an as needed basis.

**Wildland Fire Response**
In the event of a wildland fire, on DPA land within the Unit, Resource Management staff is mobilized to evaluate potential damage that may result from suppression activity. Work is then performed to mitigate any short or long term harm to the environment or to man-made features. Items of concern that the Department does not have authority to address are passed on to the most appropriate local, state or federal agency for further evaluation, and or action. Items of concern on private land that cannot be addressed during suppression repair efforts and are not the jurisdiction of another governmental agency are referred to the landowner. In 2019, Unit Resource Management staff performed suppression repair activities on the Milpas, Star, and Taboose fires within the Unit and the Saddleridge, Tick, and Getty fires in LA County.

**Forest Health**
The Gold Spotted Oak Borer (GSOB) is an introduced pest that was first discovered outside its native...
range in San Diego County in 2008. It has since been identified in Riverside, Orange, and Los Angeles Counties. In 2017, Los Angeles County Fire Department received a Forest Health grant to remove GSOB infested trees in the SRA community of Green Valley. GSOB was found in Oak Glen in San Bernardino County in 2018 and in Big Bear and Wrightwood in San Bernardino County in 2019. It is believed to have been transported into and throughout southern California via movement of infested firewood. The infested trees identified in Big Bear and Wrightwood were removed in 2019 by the Pilot Rock hazard tree crew. Stakeholders representing local, state, and federal governments, non-profits, academia, and the public met to develop a GSOB response plan focusing on surveying, monitoring, outreach, and education. Several workshops were held throughout the San Bernardino mountains to educate the public about the history of the beetle in southern California, the life cycle of the beetle, and identification and management of infested trees. Additionally, numerous GSOB trainings were provided to tree professionals and other outdoor workers in the mountains focused on identification and reporting of infested trees. The group will continue to meet throughout 2020 and into the future, addressing the evolving GSOB situation in San Bernardino County.

Pilot Rock hazard tree crew removing and treating GSOB infested trees in Big Bear

The Polyphagous Shot Hole Borer (PHSB) is another introduced pest that has invaded southern California. So far it’s known presence in San Bernardino County is limited to the western part of the County (Ontario and Chino) with a single find in Loma Linda. The United States Forest Service’s June 2019 aerial tree mortality survey of the San Bernardino National Forest estimates there are approximately 13,500 acres of the 800,000-acre Forest experiencing some level of tree mortality. That mortality is mostly less than 5 trees per acre and is occurring in the form of single trees or small clusters of trees. The largest concentration of tree mortality is in the Crestline area. California Climate Investments is helping fund the Unit’s Insect Control Program and projects such as the Mountain Rim Fire Safe Council’s Hazardous Tree Removal grant to address tree mortality within the Unit. The Unit continues to work with Caltrans and other agencies to assist in the removal of dead trees along highways and infrastructure. Tree mortality due to native forest pests like the western pine, Jeffrey pine, and fir engraver beetles will continue to fluctuate as forest health and environmental conditions impact pest populations. Unit Resource Management will continue to identify, implement, and support efforts to address impacts associated with these pests.

Since 2012, coast live oak trees have been observed dying in several southern California counties including Orange, Riverside and Los Angeles. Much of the coast live oak tree mortality is attributed to foamy bark canker, a fungal disease spread by the western oak bark beetle (WOB). WOB attacks
trees weakened by drought, disease, injuries, or other factors that may stress a tree. It was discovered that the disease is also killing California black oaks in the San Bernardino Mountains. This finding came from collaborative work between CAL FIRE San Bernardino and the University of California at Riverside (UCR) Cooperative Extension’s Plant Pathology Department. BDU staff will continue to educate people about the risks associated with this disease, preventative options, and treatment methods.

**Forest Practice & Environmental Compliance**

Resource Management staff also conducts Forest Practice inspections pursuant to the California Forest Practice Act. The inspections are performed to ensure the Forest Practice Rules (FPRs) are implemented to protect all natural and cultural resources in a forest environment. Most Forest Practice related work is in the form of Less Than Three Acre Conversion Exemptions and Timber Harvest Plan exemptions.

Resource Management staff conducts environmental reviews (California Environmental Quality Act-CEQA) for existing facilities maintenance or new construction projects within the San Bernardino Unit. Unit facilities include fire stations, conservation camps, Unit Headquarters, or other infrastructure. Projects may include, but are not limited to, the replacement of generators, new gates and fences, roads and parking lots, alterations to the land, utility systems, improvements to drainage systems, or constructing new buildings.

The Resource Management staff also reviews CEQA related environmental documents for projects submitted by other government agencies. These types of proposed projects are located within the Unit, may have an impact upon the Department’s fire and/or natural resource protection and management responsibilities, or require the Department’s permits or approval. Project comments are submitted to the lead CEQA agency and the appropriate level of CAL FIRE involvement is determined.

**Outreach & Education**

The Resource Management staff also partakes in information and education programs throughout the Unit. School or university presentations about forestry and fire are conducted, foresters teach during the teacher’s Forest Ecology Workshop in collaboration with the Mohave Environmental Education Consortium, and foresters also teach and participate in the San Bernardino Forestry Challenge among other community programs. This year, the field portion of the San Bernardino Forestry Challenge was held at the Sawmill fuel reduction project site.
Forestry Assistant II Ian McBride, Unit Forester David Haas, and previous Unit Forester Henry Herrera help prepare for the San Bernardino Forestry Challenge

Priorities:
A. Resource Management priorities in fuels reduction/fire prevention are as follows:
   1. Assist community groups and private landowners in planning and implementing fuel reduction and vegetation management projects.
   2. Work with partners to address forest pest and forest health issues.
   3. Develop and implement internal fuels and fire prevention projects described above.
   4. Continue to enforce and ensure compliance with the Forest Practice Rules.
   5. Maintain good relations with cooperators and develop new partnerships.
Collaboration: Community/Agencies/Fire Safe Councils

FENNER CANYON CC:

OVERVIEW

The San Bernardino Unit’s Conservation Camp Program consists of the Chino Institute for Women Fire Training Center, as well as four conservation camps: Prado, Pilot Rock, Owens Valley, and Fenner Canyon. The conservation camps are located within San Bernardino, Los Angeles and Inyo counties; providing a combined resource total of 19 fire crews, a mobile kitchen unit (MKU), mobile food dispensing unit, two insect control crews, and various in camp products.

The conservation camps within the San Bernardino Unit work with federal, state, and local government agencies on fuels modification projects, broadcast burning, pile burning, and reforestation. These agencies include: Cleveland National Forest (CNF), San Bernardino National Forest (BDF), Angeles National Forest (ANF), Inyo National Forest (INF), Bureau of Land Management (BLM), California State Parks, and Kern County.

Fenner Canyon Conservation Camp (CC) is located at 29500 Big Rock Creek Road in the community of Valyermo, within the Angeles National Forest in Los Angeles County.

Under a Cooperative Agreement with the California Department of Corrections and Rehabilitation (CDCR), there are 128 inmates housed at Fenner Canyon CC, which make up six fire crews and the support staff for the crews and camp. Staffing consists of 1 Division Chief, 12 Fire Captain B’s, 1 Office Tech, 1 Heavy Equipment Mechanic, and 1 CDF Maintenance Mechanic.

CAL FIRE operates the camp under a special use permit issued by the United States Forest Service (USFS). Under the conditions of the special use permit, CAL FIRE provides a minimum of two crews per day for project work on the Forest. Camp facilities include: dormitories, hobby shop, gym, kitchen, automotive shop, chain saw shop, and sewing shop.

In 2009, the Station Fire burned Los Angeles County Fire Department’s Mount Gleason Camp. Thus, Los Angeles County Fire has been given the authority to dispatch Fenner Canyon Crews to initial attack responses within the state responsibility area (SRA) that are protected, under contract, by the Los Angeles County Fire Department. All emergency crew transports (ECT) assigned to Fenner Canyon CC have been issued Los Angeles County Fire radios and communicate directly with their dispatch center. In 2017, the fire crews have logged a combined total of 6,274 emergency response hours.
RESPONSE AREA:
Fenner Canyon CC’s emergency response area includes the following:

A. San Bernardino Unit:
   The area east of Interstate 5, west of Interstate 15, south of Highway 18, and north of the Angeles National Forest/San Bernardino National Forest boundary lines.

B. Los Angeles County:
   The area east of 90th Street E, west of the San Bernardino County line, south of the Kern County line, and north of the Angeles National Forest boundary line.

C. Angeles National Forest:
   The area east of the Angeles Forest Highway, west of the San Bernardino National Forest boundary line, south of the Angeles National Forest boundary line, and north of the Angeles Crest Highway.

D. San Bernardino National Forest:
   The area east of the Angeles National Forest boundary line, west of Interstate 15, south of the San Bernardino National Forest boundary line, and north of Lytle Creek Canyon Road.

E. Bureau of Land Management (BLM)/California Desert District (CDD):
   The area east of the Bakersfield BLM District (BBD), west of the Colorado River, south of Death Valley, and north of Highway 18.

F. Kern County:
   The area east of the Caliente, west of the BBD boundary near the Tehachapi’s, south of Kernville, and north of the Los Angeles County line.

PROJECTS:

A. CAL FIRE San Bernardino Unit Facilities:
   San Bernardino Unit Facilities consist of a variety of project responsibilities, which include: facility and ground maintenance, light construction, carpentry, station maintenance, painting, hazard reduction of weeds, landscaping, and litter control. Crews are also assigned the task of assisting Training Staff with wildland firefighting classes that teach shelter deployment, hose lays, line construction and tool outs.

B. California State Parks/Tehachapi District:
   The Tehachapi District consists of four state parks: California State Park Fort Tejon (Lebec, Kern County), California State Park Poppy Reserve (Lancaster, Los Angeles County), California State Park Red Rock (north of Mojave, Kern County), and California State Park Saddle Back (Lake Los Angeles, Los Angeles County). Work performed at these sites include: brush and weed hazard reduction around structures and fence lines, fuel breaks, repair and maintenance of facilities and campsites, fence work, trail maintenance, and construction of a sanctuary for tortoise habitation.

C. CALTRANS/ Victorville – Cajon Pass Station:
   CALTRANS projects run along Interstate 15 from Devore to Barstow, Hwy 18 from the Los Angeles County line to Lucerne Valley, Hwy 395 from Hesperia to Kramer’s
Junction, Hwy 138 from the Los Angeles County line to Interstate 15, and Hwy 2 in Wrightwood. Fenner Canyon Crews commonly clear State right-of-way’s of brush, tumbleweeds, trash and debris and routinely provide hazard mitigation maintenance using fuel breaks along fence lines located in these areas. Fenner Canyon Crews are also responsible for the repair and cleaning of drainages, as well as maintenance for the CALTRANS Victorville and Cajon Pass Yards.

D. Bureau of Land Management California Desert District (CDD):

Projects with the CDD include fuels management projects at the Mojave Preserve (i.e. cutting brush and preparing piles for burning). Details for broadcast burning on the Mojave Preserve are being worked out to include Fenner Canyon Crews, which would require the crews to spike out at the Mojave Preserve.

E. Angeles National Forest (ANF):

Under the special use permit, Fenner Canyon CC provides the ANF with two crews per day. Depending on the work project and timeframe, the camp will provide additional crews as need. Fenner Canyon Crews are dedicated to reforestation efforts in the areas that were impacted by the Station Fire, which burned over 100,000 acres. Tree Release and Wrightwood Fuels Management Projects require crews to complete tasks that consist of: felling hazardous trees, campground maintenance, trail maintenance, fuels reduction projects, hazard reduction projects, snow removal, trash removal, tree plantation projects and facility maintenance at the Big Pines and Grassy Hollow Visitor Centers. Crews also work on the Santa Clara Mojave River Ranger District campgrounds and hiking trails; performing minor construction, plumbing, painting, trash pick-up, snow removal, fire hazard abatement, general clean-up of ground storage areas and restrooms, repair and replacement of roads and boundary markers, parking bumpers, water lines, picnic tables, barbeque pits, and maintenance of the Pacific Crest Trail.

F. Wrightwood Fire Safe Council:

Fenner Canyon Crews commonly perform duties within the community of Wrightwood. The Fenner Canyon crews have recently worked in the Wrightwood community with the increasing Bark Beetle activity, and are expected to continue as drought conditions persist. Various hazard mitigation methods are utilized; increasing safety for the community. The Wrightwood Fire Safe Council currently has projects in which Fenner Canyon Crews are assigned: The Highway 2 Hazard Mitigation Project and the Adopt-A-Hydrant Program. Fenner Canyon Crews assigned to the Highway 2 Mitigation Project mitigate potential hazards by removing grass and brush within the CALTRANS right-of-way along Highway 2, between Highway 138 and the Los Angeles County line in Wrightwood. The Wrightwood Adopt-A-Hydrant Project utilizes Fenner Canyon Crews for clearing vegetation around fire hydrants. The crews also perform winter snow removal around the hydrants to provide San Bernardino County Fire Department personnel adequate working space around hydrants during emergency situations.

G. Lions Camp Wrightwood:

In addition to the services provided for the community of Wrightwood, Fenner
Canyon Crews also perform hazard mitigation techniques to Lions Camp Wrightwood. This project includes minor construction, plumbing, painting, trash pick-up, snow removal, sewage repair and installation, fire abatement, fuel reduction, general clean-up of grounds and buildings to include storage areas and restrooms, replace and repair road and boundary markers, parking bumpers, water lines, picnic tables, and other duties as requested.

H. San Bernardino County Flood Control District:
Fenner Canyon Crews provide services to the San Bernardino County Flood Control District. The Crews are assigned tasks that provide economic benefits to San Bernardino County by: reducing maintenance cost, suppression cost, flood damage, and the elimination of hazards. These goals are accomplished by reducing fuel loads and creating fire breaks, creating improved watersheds, and improving vegetation configurations, fire density, and the restoration of wildlife habitat.

I. City of Highland:
The City of Highland Project provides services to General City Facilities to help reduce costly maintenance for the City of Highland. Fenner Canyon Crews perform various tasks, which include: facility, grounds and maintenance, mowing lawns, fertilizing, seeding, hazard reduction of weeds, litter control, landscaping, clean-up, carpentry and painting to maintain and enhance city facilities.

J. Patton State Hospital:
Patton State Hospital, located at 3102 E. Highland Avenue, in Highland, California. Crews provide hazard mitigation by removing debris and dirt from flood control channels, grounds maintenance, landscaping, hazard tree removal, carpentry, and painting; enhancing the appearance of the State facility.

K. California Department of Water Resources:
Fenner Canyon Crews provide weed abatement along the California aqueduct and around various water treatment facilities in San Bernardino, Los Angeles, and Kern Counties as well as performing litter pick up and invasive species removal.

L. San Bernardino National Forest (BDF):
Fenner Canyon Crews assist the San Bernardino National Forest with Timber Stand Improvement and Fuels Management Projects, trash and litter control, felling hazardous trees, campground maintenance, trail maintenance, fuels reduction projects, hazard reduction projects, snow removal, tree plantation projects and facility maintenance both in the Wrightwood area and the Cajon Pass. Fenner Canyon Conservation Camp is also one of the primary partners in the Cajon Pass Ignition Reduction project.
COLLABORATION:

RPC 3(e)(iv)
PILOT ROCK CC:
OVERVIEW
Pilot Rock Conservation Camp (CC 15) is located in Miller Canyon off Hwy 138 6 miles north of Crestline in the community of Crestline near Lake Silverwood, within the San Bernardino National Forest in San Bernardino County.

Under a Cooperative Agreement with the California Department of Corrections and Rehabilitation (CDCR), there are 85 inmates housed at Pilot Rock CC which make up three fire crews and one hazard tree crew, that make up a fourth fire crew. Staffing consists of 1-Division Chief, 1-Battalion Chief, 10-Fire Captain B's, 1- Heavy Equipment Mechanic, shared between Pilot Rock Camp and Fenner Camp, and 1-Water/Sewer Plant Operator.

CAL FIRE operates the camp under a special use permit issued by the United States Forest Service (USFS). Camp facilities include: dormitories, hobby shop, kitchen, automotive shop, saw shop, canvas shop, waste treatment plant and lab.

RESPONSE AREA
Pilot Rock CC’s emergency response area includes the following:

A. San Bernardino Unit:
   The area east of Interstate 15, west of twenty-nine palms, North of Interstate 10 south of Apple Valley and Inyo and Mono Counties

B. Bureau of Land Management (BLM)/California Desert District (CDD):
   The area east of the Bakersfield BLM District (BBD), west of the Colorado River, south of Death Valley, and north of Highway 18.

C. San Bernardino National Forest:
   Federal responsible areas within San Bernardino County

PROJECTS

A. CAL FIRE San Bernardino Unit Facilities:
   San Bernardino Unit Facilities consist of a variety of project responsibilities, which include: facility and ground maintenance, light construction, carpentry, station maintenance, painting, hazard reduction of weeds, landscaping, and litter control. Crews are also assigned the task of assisting Training Staff with wildland firefighting classes that teach shelter deployment, hose lays, line construction and tool outs.

B. California State Parks Lake Silverwood
   Work performed at these sites include: brush and weed hazard reduction around structures and fence lines, fuel breaks, repair and maintenance of facilities and campsites, fence work, trail maintenance, and hazard tree removal.

C. San Bernardino National Forest (BDF):
Projects for the BDF are located throughout San Bernardino N.F. Pilot Rock Crews work with the Forest on broadcast and pile burning by constructing fire line, performing fire attack, control, holding operations, and mop-up. Work also includes hazard mitigation projects such as fuel reduction and fuel breaks providing protection to various mountain communities located throughout the San Bernardino National Forest including roadside brush removal on various mountain truck trails, rural roads, and egress routes identified by the Mountain Area Safety Task Force.

D. CALTRANS:

E. Adopt A Highway:
Pilot Rock crews are responsible for vegetation control and litter removal along Hwy 138 around Lake Silverwood. To provide aesthetic benefits of cleaner and more beautiful roadsides and prevent potential pollutants from entering our waterways.

F. San Bernardino County Flood Control District:
Pilot Rock Crews provide services to the San Bernardino County Flood Control District. The Crews are assigned tasks that provide economic benefits to San Bernardino County by: reducing maintenance cost, suppression cost, flood damage, and the elimination of hazardous timber along county roads maintaining ingress and egress routes clear and safe. Other common responsibilities include clearing flood basins of non-native vegetation and debris to maintain clear water flows at road crossings. These goals are accomplished by reducing fuel loads and creating fire breaks, creating improved watersheds, and improving vegetation configurations, fire density, and the restoration of wildlife habitat.

G. San Bernardino County Regional Parks:
Lake Gregory, Mojave Forks, Glen Helen. Work performed at these sites include: brush and weed hazard reduction around structures and fence lines, fuel breaks, repair and maintenance of facilities and campsites, fence work, trail maintenance, and hazard tree removal.

H. Hesperia Parks and Recreation:
Pilot Rock crew provide economic benefits to city of Hesperia by: reducing maintenance cost and the elimination of hazards by providing general park and road side upkeep and maintenance including irrigation repairs, trimming, weed abatement and general maintenance.
I. Helendale CSD:

Pilot Rock crews provide maintenance of public facilities in and around the community of Helendale. Including weed abatement, minor building repairs, and vegetation reduction and irrigation system maintenance.

J. Insect Control Program (ICP):

Pilot Rock crews carry out the Unit’s Insect Control Program. CAL FIRE is given authority to use monies for controlling forest insects by the Public Resources Code (Article 5, Sections 4712-4718) and by the Declaration of a “Zone of Infestation” by the State Board of Forestry. CAL FIRE has authority only to treat actively infested trees on private land within SRA with habitable structures. The purpose of the program is to assist landowners with tree removal cost to control the spread of bark beetles and reduce the fire risk. Ultimately it is the landowner’s responsibility to remove hazardous trees.

K. Fuels Reduction and Fire Prevention

Fuel reduction projects will be identified for future planning with local Fire Safe Councils, BDU resource management, and local cooperators. Once established, the fuel reduction along identified corridors and perimeter can help reduce the number of roadside fires started by vehicles and discarded burning materials. This will help ensure roads used for ingress and egress, do not have fuel loads immediately adjacent to the roadway and provides defensible areas to slow or stop the rate of fire spread. CAL FIRE crews are taking an active role in reducing the severity and spread of the bark beetle and associated mortality by felling and then treating the downed material.

PRADO CC:

OVERVIEW
Prado Conservation Camp is located at 14467 Central Avenue in the City of Chino in San Bernardino County.

Under a Cooperative Agreement with the California Department of Corrections and Rehabilitation (CDCR), there are currently 91 inmates housed at Prado CC, which make up four fire crews, Mobile Kitchen Unit, and Regional Staging Area. The support staff for the crews and camp, consists of 1 Division Chief, 8 Fire Captain B’s and 1 Heavy Equipment Mechanic.

Prado Helitack successfully transitioned from an inmate-staffed Helitack program with the San Bernardino County Sheriff and the California Department of Corrections and Rehabilitation, to a dedicated Helitack crew with hoisting capabilities designed to assist with rescue efforts and mutual aid throughout the region. This has resulted in an additional helicopter to the State’s fleet. This new program is a significant accomplishment for the Department, Region and Unit. Additionally, the San Bernardino Unit has completed an interim helibase facility at Prado Conservation Camp. CAL FIRE operates the camp. Camp facilities include: CAL FIRE office and BOQ, CDCR office and BOQ, dormitories, hobby shop, apparatus bay, kitchen, automotive shop, and chain saw shop.

RESPONSE AREA:
Prado CC’s emergency response area includes the following:
   A. San Bernardino Unit (BDU):

   The area east of the San Bernardino County line, west of Interstate 15, south of the Angeles National Forest boundary line, and north of the Cleveland National Forest boundary line.

   B. Los Angeles County (LAC):

   The area east of Interstate 605, west of the Los Angeles County / San Bernardino County line, south of the Angeles National Forest boundary line, and north of the Orange County line.

   C. Orange County (ORC):

   The area east of Highway 57, west of the Cleveland National Forest boundary line, south of the Orange County / San Bernardino County line, and north of the Pacific Ocean.

   D. Angeles National Forest (ANF):

   The area east of the Angeles Crest Highway, west of Interstate 215, south of Kenwood and Interstate 15, and north of interstate 210.

   E. San Bernardino National Forest (BDF):

   The area east of the San Bernardino National Forest boundary line, west of the San Bernardino County / Riverside County line, south of the San Bernardino National Forest boundary line, and north of interstate 10.

   F. Cleveland National Forest (CNF):

   The area east of Highway 241, west of Interstate 15, south of Highway 91, and north of Highway 74.

PROJECTS:
   A. CAL FIRE San Bernardino Unit Facilities:
San Bernardino Unit Facilities consist of state fire stations and the Unit Headquarters in the San Bernardino Unit. A variety of project responsibilities are performed which include, but are not limited to facility and ground maintenance, light construction, carpentry, painting, hazard reduction of weeds, and landscaping.

B. California Department of Forestry/ Region Office – Special Projects/ Car Wash:

Region Office Facility in Riverside consists of a variety of project responsibilities, such as facility and ground maintenance, light construction, carpentry, painting, hazard reduction of weeds, landscaping, and litter control. Crews are also assigned the task of helping clean the shop area as well as wash all vehicles at the Regional Office.

C. California State Parks / Chino Hills – Special Projects

Chino Hills State Park consists of 14,000 acres ranging from the Santa Ana Mountains to the Whittier Hills and has over 65 miles of trails. The crews work diligently throughout the park, performing fuel break maintenance, vegetation management, trail maintenance, tree felling and trimming, and road/drainage repair at creek crossings.

D. Yucaipa City Fire (CAL FIRE)

Crews work at fire stations doing general yard maintenance, hazard fuel removal, and general maintenance.

E. California State Beaches / Orange County Coast District

The Orange County Coast District consists of six State Beaches: California State Beach San Onofre, California State Beach San Mateo, California State Beach San Clemente, California State Beach Doheny, California State Beach Crystal Cove, and California State Beach Bolsa Chica. Work performed at these sites include: Fire hazard reduction and fuel breaks, brush and weed reduction around structures and campsites, restoration of wildlife habitat, removal of invasive species, building and maintaining trails, tree felling and chipping, landscaping, light construction, and maintenance of facilities and infrastructure.

The Orange County Coastkeeper Garden is an area where residential property owners and renters in Orange County can see examples of drought tolerant and water friendly backyards. The area set a side is part of the Santiago Canyon College and crews help construct pathways, plant trees and shrubs, remove weeds and mulch, spread decomposed granite, and place boulders.

F. City of Corona / Corona Airport

Removal of sapling trees and vegetation in the runway protection zone, as well as fuels reduction for flood control in the south and north areas of the airport.

G. City of Corona / Corona Fire Department / Corona Fuel Break

Work with prevention personnel with the Corona Fire Department to reduce fuel loading and provide fuel breaks between homes in Corona and the Prado Flood Basin.

H. City of Corona / Public Works Department

This project is in the Prado Flood Basin and is limited to ponds 9 and 10 near Greenbriar Street. Crews remove trash and debris from both ponds and the surrounding areas. They also remove non-native plant species, like Tamarisk and Castor Bean, from the ponds, and provide hazard fuel reduction and litter removal around various city parks throughout the City of Corona.

I. United States Forest Service / San Dimas

Prado CC works in conjunction with the Angeles National Forest and the San Dimas Experimental
Forest in fire hazard reduction, trail maintenance, debris and silt removal and minor facility maintenance at Tanbark, Rain Gauge Hill, Monroe Stream Gauge Station, Volfe Stream Gauge Station, Lysimeter, Bell canyon, West Fork Trails, Fern Rain Gauge Trail, and Wolfskill Rain Gauge Trail.

J. San Bernardino County Floods Control District

Work is performed at the various flood control areas within San Bernardino County consist of vegetation removal, weed abatement, fuels reductions, fuel breaks, and facility/grounds maintenance.

K. California Department of Corrections / CIM – Gun Range

Work is performed at the California Institute for Men in the City of Chino. The firing range is utilized by California Department of Corrections and other law enforcement agencies throughout the state. Work performed is grounds maintenance, fire hazard reduction and tumbleweed pile burning, landscaping, and facility maintenance to the classroom.

L. California Department of Corrections / CIM – Special Projects

Work is performed at the California Institute for Men in the City of Chino. Ground maintenance and trash pickup in various parts of the facility are performed.

M. Chino Valley Fire Department / Carbon Canyon

Through a Federal Grant, Chino Valley Fire Department is using crews to create a shaded fuel break throughout the populated areas in the Orange, San Bernardino, and Los Angeles Counties north of Highway 142 in the Carbon Canyon area. Work consists of building a fuel break by removing the dead and downed fuels as well as breaking up the continuity of fuel loading in the project area.

N. Inland Empire Utilities Agency / Chino Creek Park

The Chino Creek Park Wetlands and Ecosystem Restoration project is located at the south-east corner of Kimball Avenue and El Prado Road. Within the 22-acre site crews plant small trees and shrubs, install irrigation lines, remove non-native species, and pick up litter.

O. California Department of Fish and Wildlife

The Fish and Wildlife facility, located the City of Chino Hills, is primarily used as a storage area. Work performed includes fuels reduction, hazard abatement and clearance of facilities, limb and pruning of trees, and light construction on buildings. Prado Conservation Camp supports the counties of Los Angeles, Orange, and San Bernardino. As well as the communities of Chino, Chino Hills, Corona, Diamond Bar, and City of Industry with vital fuels projects and community enhancements.

P. CALTRANS DOT (Inland Empire Division)

Work in conjunction with CALTRANS personnel to complete road side cleanup on HWY 71 from Riverside County line to LA County line and from the 60 Fwy and 10 Fwy from Riverside County line and LA County line.

Q. Chino Water Basin District

Work is performed at the various flood control areas within San Bernardino County and consist of vegetation removal, weed abatement, fuels reductions, fuel breaks, facility/grounds maintenance and trash removal.

RPC 3(e)(iv)
OWENS VALLEY CC:

OVERVIEW
Owens Valley Conservation Camp (CC) is located within the BDU/Eastern Sierra Division at 2781 S. Round Valley Road in the community of Bishop, in Inyo County. Under a Cooperative Agreement with the California Department of Corrections and Rehabilitation (CDCR), there are 128 inmates housed at Owens Valley CC, which make up five fire crews and the support staff for the crews and camp. Staffing consists of 1 Division Chief, 1 Battalion Chief, 10 Fire Captain B’s, 1 Office Tech, 2 Heavy Equipment Operator/ Mechanic, and 1 CDF Maintenance Mechanic/WASPO.

Camp facilities include: dormitories, hobby shop, exercise yard, kitchen, automotive shop, chain saw shop, wood shop, welding shop and sewing shop.

RESPONSE AREA:
Owens Valley CC’s emergency response area includes the following:

A. Inyo, Mono, San Bernardino Unit:
   The area west of the Nevada state line (Inyo & Mono Counties), north on Highway 395 to the Lake Topaz and north on Highway 6 to Montgomery Pass to the Nevada state line (Mono County) and Toiyabe National Forest, South on Highway 395 to Inyokern (Kern County), and East of the Eastern Sierra Mountain Range/ Inyo National Forest (INF).

B. Inyo National Forest:
The area between the White Mountains and Eastern Sierra Mountain Range.

C. Toiyabe National Forest:
The area approximately 5 miles north-west of Bridgeport to the Toiyabe National Forest Boundary line.

D. Bureau of Land Management (BLM):
   1. Owens Valley District (OVD) & California Desert District
   2. The area north of Coso Junction (CDD)
   3. The area south of Topaz Lake on Highway 395 & south of the Nevada state line at Montgomery Pass on Highway 6. (OVD)

E. National Parks:
   1. The area north west of Death Valley National Park boundary line.
   2. The area east of the Yosemite National Park at Tioga Pass boundary line.
PROJECTS:

A. CAL FIRE Inyo, Mono, San Bernardino Facilities:
   San Bernardino Unit Facilities consist of a variety of project responsibilities, which include: facility and ground maintenance, light construction, carpentry, station maintenance, painting, hazard reduction of weeds, landscaping, and litter control. Crews are also assigned the task of assisting Training Staff with wild land firefighting classes that teach shelter deployment, hose lays, line construction and tool outs.

B. Owens Valley Shaded Fuel Breaks:
   Crews creating shaded fuel breaks for fire protection in SRA lands around the communities in the Owens Valley including Bishop, Big Pine, Independence, Lone Pine, Olanche, Mono City, Wilkerson, and Swall Meadows.

C. Cal Trans/ Bishop:
   CALTRANS projects run along Highway 395 Lone Pine to Mammoth, Highway 6 from the Nevada state line to Bishop, Highway 168 from the Nevada state line to Lake Sabrina. Owens Valley Crews commonly clear State right-of-way of brush, tumbleweeds, trash and debris (Adopt a Highway) and routinely provide hazard mitigation maintenance by the use of fuel breaks along fence lines located in these areas. Owens Valley Crews are also responsible for the repair and cleaning of drainages.

D. Department of FISH and Wildlife: Fish Springs, Black Rock, Mt. Whitney, Hot Creek.
   Fish and Wildlife Facilities consist of a variety of projects, which included general maintenance and clean up, including brush removal tree trimming, fire and flood hazard reduction, general maintenance and repair of facilities and grounds.

USFS/BLM

A. Swall Meadows:
   Fire Crews utilized to thin dead trees in forest areas affected by the Round Fire in and around the community of Swall Meadows. This will create a shaded fuel break to protect against future fire activity.

B. Mammoth Lakes:
   Fuels reduction will be managed through brush clearing, tree liming and felling, and preparing fuels for chipping and burning. This will occur within the town and surrounding USFS Lands, including Reds Meadow and Devils Postpile.

C. BLM Campgrounds
   General maintenance and clean up in the following Campgrounds: Tuttle Creek, Goodale Creek, Horton Creek, and Crowley Lake. Crews to remove overgrown brush and mitigate hazardous trees. This will improve public safety and risk of fire.
LOS ANGELES CITY/ LADWP:

D. Control Gorge:
   Crews will be clearing brush and trimming trees around houses and Power Plant area to provide a defensible fire break.

E. Locust:
   Crews will be clearing locust trees so they can be treated by the sponsor with herbicide. Trees shall be cut to firewood lengths or to 8ft. post length. In some areas, the slash will be hauled to another site to be disposed of and some sites will be piled on site for later burning.

F. Russian olive:
   Crews will be clearing and Cutting the Russian olive and Salt Cedar Trees in the Georges Creek area an important wildlife area.

G. Independence Woodlot:
   Crews will need to trim out all weedy tree species, and cut saplings for replanting in the spring. Crews will harvest all dead trees and possibly harvest a couple rows of trees per the harvest plan. Crews will cut trees into firewood for LADWP community donation.

H. Lone Pine Woodlot:
   Crews will need to trim out all weedy tree species, and cut saplings for replanting in the spring. Crews will harvest all dead trees and possibly harvest a couple rows of trees per the harvest plan. Crews will cut trees into firewood for LADWP community donation.

I. Division Creek Power Plant:
   Clear brush, debris, and tree limbs from around Power Plant and Intake structures to provide defensible fire break areas. Work needs to be completed to provide fire protection and to comply with CAL FIRE Defensible Area Requirements. Clear brush and debris in ditch and along ditch banks of water conveyance ditch between Scotty’s Spring and Division Creek Power Plant Intake.

J. Cottonwood Power Plant:
   Clear brush, debris, and tree limbs from around Power Plant and Intake structures to provide defensible fire break areas. Work needs to be completed to provide fire protection and to comply with CAL FIRE Defensible Area Requirements.

K. Big Pine Power Plant:
   Clear brush, debris, and tree limbs from around Power Plant and Intake structures to provide defensible fire break areas. Work needs to be completed to provide fire protection and to comply with CAL FIRE Defensible Area Requirements.
L. Various Snow Courses:
   Maintain travel routes for snow cats to access locations to measure snow packs. This is done by removing fallen trees, liming trees, and removing ground materials during Summer months.

INYO COUNTY:

M. Waste Management:
   Big Pine Transfer, Independence, Lone Pine, Bishop Sunland.
   General Maintenance and clean up. Removal of wind-blown litter inside and outside fence line and at specific target areas.

N. Park and Recreation:
   Baker Creek Camp Ground, Diaz Lake, Izaak Walton Park, Mendenhall Park, Millpond Park, Pleasant Valley Camp Ground. General Maintenance and clean up. Including brush removal, tree trimming, and hazard reduction in the various parks and camp grounds.

O. Road Department:
   Crews will clean tree limbs and tumble weeds out of the Bishop By-Pass channel to allow for uninterrupted spring runoff flows; this is needed to keep the waterways clear that go under the roadways, if waterways clog up with debris the water will create damage to the road.

P. Mosquito Abatement:
   Crews will cut willows that impede access to and treatment of developing Mosquito population.

Q. Airports:
   Bishop, Independence, Lone Pine: General Maintenance and clean-up of Inyo County Facilities, grounds and runways, including brush removal and hazard reduction.

R. City of Bishop:
   Projects with the city of Bishop include working with the Chamber of Commerce assisting them with setting up and disassembling equipment for special events being held at the city park. Also, taking crews out to the Pleasant Valley Reservoir and cleaning the area of litter and debris before and after and setting up tents, tables and displays for the Fishing tournament, Brush clearance and cleanup along creek within the vicinity of the Bishop Senior Recreation Center.

S. Bishop Paiute Indian Reservation:
   Projects consist of removing hazardous Fuels reduction for the Bishop Paiute Tribe and create a defensible space for tribal structures. Maintain multiple waterways by cleaning overgrown brush, and fallen trees.

RPC 3(e)(iv)
T. State Fair/ Tri County Fair Grounds:
   General maintenance and repair of facilities and fairground, set up for events and
tear down after events. Tri County holds numerous events (Eastern Sierra Fair, Mule
Days, California high School Rodeo Association Finals, Choo swap meet, Fall Colors
car show).

U. Lone Pine Fire Safe Council:
   Owens Valley Crews commonly perform duties within the community of Lone Pine.
   Various hazard mitigation methods are utilized; increasing safety for the
   community. The Lone Pine Fire Safe Council currently has the Airport VMP Burn
   project in which Owens Valley Crews are assigned to.

V. Independence Fire Safe Council:
   Owens Valley Crews commonly perform duties within the community of Independence. Various hazard mitigation methods are utilized; increasing safety
   for the community.

W. Big Pine Fire Safe Council:
   Owens Valley Crews commonly perform duties within the community of Big Pine. Various hazard mitigation methods are utilized; increasing safety for the
   community.

X. Eastern Sierra Regional Fire Safe Council:
   Owens Valley Crews commonly perform duties within the community of South Fork
   Bishop Creek. Owens Valley crews will cut a fire defensible space around the
   building in the community for public, reduction of hazards, and establish a shaded
   fuel break and fuel reduction.

Y. Bernasconi Center:
   The crews will create brush clearances for defensible space for buildings on the
   school grounds. Improve and restore water flows for firefighting by cleaning out
   the ditches and ponds.

Z. Round Valley School District:
   General Maintenance, clean up and repair of buildings and grounds.

AA. Owens Valley School District:
   General Maintenance, clean up and repair of buildings and grounds.

BB. Friends of Eastern Sierra California Museum:
   General Maintenance of facilities, grounds, and exhibits to promote public safety
   and preserve the history of the Owens Valley.

CC. Friends of Mt. Whitney Fish Hatchery:
   Owens Valley Crews will assist with ground maintenance, tree trimming. Removal
of residual brush piles, clean ponds, and raceways that was filled with debris from
the 2007 flood.

DD. Eastern Sierra Dog Rescue:
   Owens Valley Crews will assist with Ground Maintenance, Fencing, and
   Landscaping within the Inyo Animal Shelter.

EE. Laws Railroad Museum:
   The crews will perform general maintenance of fence lines, building and grounds
   within and around the Historical Museum

FF. Woodman Cemetery:
   The crews assist with the removal of weeds from woodman cemetery inside and
   outside of fence line.

MONO COUNTY:
GG. Waste Management: Benton Crossing Landfill
   General Maintenance and clean up. Removal of wind-blown litter inside and
   outside fence line and at specific target areas.

HH. Mammoth Lakes Fire Department:
   The crews perform winter snow removal around the hydrants to provide Mammoth
   Lakes Fire Department personnel adequate working space around hydrants during
   emergency situations. Also, the crews help with Fuels Management Projects which
   require crews to complete tasks that consist of: felling hazardous trees, trail
   maintenance, fuels reduction projects, hazard reduction, litter removal in the
   Shady Rest area into town.

II. Town of Mammoth Lakes:
   The crews will help thin trees in forested areas to provide fire breaks and improve
   overall health of the forest. In addition to vegetation management in populated
   areas, crews will assist the trails crews in creating new hiking and mountain biking
   trails around the outskirts of town, while maintaining existing trails.

JJ. June Lake FD:
   Snow removal from fire hydrants and community buildings. General hazard
   removal and clean up around fire stations.

KK. Edna Beaman School: Benton
   General Maintenance, clean up and repair of buildings and grounds.

LL. Chalfant VFD:
   General hazard removal and clean up around fire stations.
MM. Lee Vining VFD:
General hazard removal and clean up around fire stations.

NN. Long Valley VFD:
General hazard removal and clean up around fire stations.

OO. Paradise VFD:
General hazard removal and clean up around fire stations.

PP. Wheeler Crest VFD:
Weeding and grounds maintenance, washing equipment, building maintenance.
Prep and paint exterior of building.

QQ. Bodie State Park:
The crews will perform general maintenance of fence lines, water systems building
and grounds within and around the park boundaries.

RR. Hilton Creek:
Clear sewer district property of weeds and sage brush for fire defensible space, and
for inspection of equipment from sewer plant personal.

SS. Owens Valley Radio Observatory:
The crews will create brush clearances for defensible space for buildings on the
OVRO facility, as well as along east-west Road corridor between site buildings.

TT. University of California Santa Barbara:
Snarl: Owens Valley crews will cut, remove, and pile brush for hazard reduction,
control of invasive species, and access to experimental stream system. While this
is City of Los Angeles lands, as lessee, they have the authority to conduct this
project. This project was done once before (2002) with Conservation Camp crews
and was very successful.

UU. Valentine Reserve:
The crews will fall, limb, and remove marked standing and down timber and slash.
Haul timber for disposal by sponsor. Haul slash to central location and chip in
sponsor’s chipper or pile for burning. All trees marked by sponsor; all work
supervised by sponsor.

VV. Swall Meadows Fire Safe Council:
Crews will perform hazardous fuels reduction along travel corridors accessing the
community of Swall Meadows to increase safety for citizens during emergency incidents
and reduce potential for fire spread.
We are committed to our local and federal cooperators and communities to reduce fire hazards and to provide fire prevention education to enhance our integrated and cooperative fire protection within the Owens Valley.

CALIFORNIA INSTITUTION FOR WOMEN (CIW) Training Facility:

OVERVIEW
During the summer of 1983, a pilot program was developed at CIW to determine the viability of using female inmates for fire suppression, and fire prevention. Once the pilot program was considered achievable, the go ahead was issued and the program was relocated to Rainbow Fire Camp in October 1983. This was the first all-female inmate firefighting camp in the state. Both CDC and CDF saw a need to expand the program to allow more females to participate in fire suppression, while addressing overcrowding issues at CIW.

The female Camp program expanded by two additional camps; Puerta La Cruz, (located near Warner Springs in San Diego County), and Malibu (located in Los Angeles County). June 1985 CIW training center was established at 16756 Chino-Corona Rd, in the city of Chino. This is the only training, and development center for female inmate firefighters in the State of California.

The operation of the Forestry Training Program (FTP) is a joint effort between CDCR, and CALFIRE. CDCR screens and classifies inmates assigned to CIW. Inmates, who meet the requirements for the Forestry program, are placed into the Pre-Forestry Training program (PFT). The PFT is 6 weeks of rigorous physical conditioning intended to transition inmates, into physically fit inmate Firefighters. CDCR sets the standards and monitors the progress of inmates, until they’re able to pass the physical requirements. Inmates in PFT have the option to challenge the 6 week PFT Program by taking a the “Pack Test Hike” which consist of a 3-mile hike with a 45-pound weighted vest over level terrain with a passing time of 45 minutes or less to pass the test. If the inmate successfully passes the “Pack Test Hike” they will bypass the PFT Program and enter the FFT Program (Fire Fighter Training) Program.

Once in FFT, the inmate is assigned to the 58-hour course training program which is designed to train to basic standards. This course was developed by the CALFIRE Academy, and is presented to the inmates by CALFIRE Captains. The first portion is a 28-classroom instruction. The course material covers, wildland fire safety awareness, S-190, teaching skills with enhancing the survivability and prevention of injuries in the hostile work environment found with fighting wildland fires. Inmates also receive training with the proper use of firefighting hand-tools, and equipment used to suppress wildland fires.

Once an inmate completes the classroom they are assigned to 30 hours’ field training, this training is taught by CALFIRE Captains. Hiking techniques, proper and safe use of fire tools, fire shelter training, and the principles of teamwork to construct fire line are taught. During the field training Inmates are expected to complete all required hikes within the allotted timeframes given. Upon completion of the field training, inmates are relocated to the various fire camps within the state.

The three camps supported by CIW training center have a total of 330 beds available. To keep the camps near capacity, CIW needs to graduate 30-35 fully trained firefighters each month. The assignment and movement of inmates through the Training Center are dependent upon individual needs per fire camp.
PRIORITIES:
A. Provide sufficient Fire Crew Captains to instruct, train and supervise camp endorsed inmates to maintain camp populations.
B. Provide all training materials, tools, aids and curriculum developed or approved by the CAL FIRE Academy.
C. Provide training sites for the field crew.
D. Provide all personal protective equipment, and other equipment, tools and supplies routinely associated with training for the inmates and staff assigned to Forestry Training Program.

CIW supports both Los Angeles County Fire Department (Malibu CC) and CAL FIRE (Puerta La Cruz CC and Rainbow CC) with qualified female inmate firefighter personnel. CAL FIRE CIW staffing consists of 1 battalion chief and 4 training fire captains.

The Fire Prevention Bureau’s Primary targets for the Burn Plan are as follows:

A. Educate and assist the Chief Officers in the importance of documentation and overall needs to their own battalions pertaining to Fire Prevention.

B. Defensible Space awareness and public education.

C. Fire Prevention Signs accountability and maintenance.

D. Interacting with the Fire Safe Councils within the Unit and reporting back to the Fire Prevention Bureau of the programs established with the councils.

E. Identifying and training VIPS for the Fire Prevention Bureau as outlined in policy to reduce liability and assist in the fore mentioned programs. This will enhance the overall goal to accomplish tasks in the Fire Prevention component within the Unit.

F. Recruitment of VIP’s throughout the Unit.

G. Establish the Unit Fire Permit Administrative Burn Plan

RPC 3(e)(iv)
Includes projects from all three programs.

Includes projects regardless of status (planned, active, and complete are all included).

Only includes projects for the unit specified at report run-time, as shown in the report title.

Only includes projects whose project start date is on or prior to the end date chosen for the report, and whose project end date is on or after the start date chosen for the report. Projects with a valid start date but no end date are also included; projects with no start date are not included.

APPENDIX C: ANNUAL ACCOMPLISHMENTS REPORTING (2019)

The San Bernardino Unit Strategic Fire Plan sets forth a vision to identify and evaluate wildland fire hazards and recognize life, property and natural resources at risk including watersheds and wildlife habitats, social impacts and other values of functioning ecosystems. In 2019, the San Bernardino Unit continued to make great strides in fostering inter-agency relations, collaboration, and abiding by the goals and objectives set forth in the Strategic Fire Plan for California.

In 2019, the San Bernardino Unit received a Caterpillar 299 skid steer with masticator, brush rake, bucket, and grapple attachments as well as a Bandit track chipper.

In 2019, the Unit completed the 390-acre Long Pond VMP and 180-acre Winterton VMP prescribed burn projects in the Owens Valley.
2019-2020 Fire Prevention grants were awarded to the Wheeler Crest Fire Protection District for the Swall Meadows Fuel Reduction project in Mono County and to the Mountain Rim Fire Safe Council for the Abatement Assistance 2020 grant in San Bernardino County. 2017 and 2018 Fire Prevention grant projects continued with implementation, supporting fuel reduction and education programs in Big Bear City, Running Springs, Crest Forest, Arrowbear, Crestline, Valley of Enchantment, Twin Peaks, Green Valley Lake, Lake Arrowhead communities, and Mammoth. (see Appendix A for a complete list of projects).

Unit personnel continued work on fuel reduction projects in the San Bernardino Mountains including the Camp Whittle fuel reduction project in Fawnskin, the Hubert Eaton Scout Reservation fuel reduction project in Cedar Glen, and the Sawmill fuel reduction project in Twin Peaks. A contract was executed with Cecil Logging to complete approximately 100 acres of mastication work at Hubert Eaton in 2020. The Unit skid steer was used to complete the 49 acres of mastication on the Camp Whittle project. CAL FIRE Region Fuels Crew 361 completed approximately half of the 95 acres of hand treatment at Camp Whittle, utilizing the Unit track chipper.

The San Bernardino Unit is collaborating with communities and stakeholders to limit the movement of goldspotted oak borer (GSOB). GSOB was found in Oak Glen in San Bernardino County in 2018 and in Big Bear and Wrightwood in San Bernardino County in 2019. It is believed to have been transported into and throughout southern California via movement of infested firewood. The infested trees identified in Big Bear and Wrightwood were removed in 2019 by the Pilot Rock hazard tree crew. Stakeholders representing local, state, and federal governments, non-profits, academia, and the public met to develop a GSOB response plan focusing on surveying, monitoring, outreach, and education. Several workshops were held throughout the San Bernardino mountains to educate the public about the history of the beetle in southern California, the life cycle of the beetle, and identification and management of infested trees. Additionally, numerous GSOB trainings were provided to tree professionals and other outdoor workers in the mountains focused on identification and reporting of infested trees. The group will continue to meet throughout 2020 and into the future, addressing the evolving GSOB situation in San Bernardino County.

RPC 3(e)(iv)
The CAL FIRE San Bernardino Unit and Southern California Edison completed the 17th year in Operation Santa Ana. Operation Santa Ana was initiated in 2000 as a response to many fires caused by power poles, powerlines, and equipment. Prior to the beginning of Operation Santa Ana approximately 50% of the large and damaging wildfires in Southern California were due to powerlines and equipment issues. There has not been a major wildland fire caused by Edison pole or powerlines in the San Bernardino County areas where CAL FIRE is responsible for protection since the program began.

The Fire Prevention Public Information Office (PIO) actively works with the media to keep the public informed on fire safety, wildfire awareness, and resource management issues. PIO’s utilized social media and press releases throughout the year to remind residents of items such as: defensible space requirements, burn permit requirements, burn permit restrictions, ready-set-go campaign information, wildland fire incident information, tree mortality and bark beetle issues, and fire prevention fee grant opportunities.

The Volunteers in Prevention (VIP) program in the San Bernardino Unit has been steadily rebuilding since July 2015. We currently have 12 VIPs and are continuing to recruit, especially in the northern areas of the Unit. The VIPs have a wide variety of educational backgrounds and have been extremely helpful with our ECC, public events, LE-100 program, resource management department, clerical work and much more.

2019 GSBO Zones of Infestation
The San Bernardino Unit is actively working with local, state, and federal agencies to help prevent catastrophic wildfires through projects related to public safety, fuel reduction, and education. The mission of the San Bernardino Unit is “work together today for a healthier, safer, and more resilient tomorrow.”

San Bernardino Unit Chief
