ARU Deployments in Progress

- 99 SwiftOne Autonomous Recording Units currently deployed on HRC MMCAs (map)
- 10 SwiftOne ARUs deployed at Jackson Demonstration State Forest
- NCASI joined the project, deploying ARUs at sites spanning north from HRC lands to Coos Bay, OR.

Summary of First Deployment

- Overall, everything went well. All acoustic data from the first deployment (~55,000 hrs) is downloaded from the SD cards and stored.
- Upon revisiting ARUs:
 - A few had missing or chewed windscreens
 - 1 mic chewed off by wildlife
 - 1 unit was stolen

Upcoming Work

- We start the second round of battery and SD card swaps, soon, kicking off the final deployment of this season
- Continue to download and store data, as SD cards are collected
- Continue progress on building the custom MAMU BirdNet detector

Questions?
